The U.S. power grid has been called one of the greatest--and largest--engineering marvels of the 20th century. Made up of more than half a million miles of transmission lines, it delivers power to 160 million customers every day.

Energy Transmission and Storage. Bent Sørensen, in Renewable Energy (Fourth Edition), 2011. Publisher Summary. Energy transmission is used not only to deliver energy from the sites of generation to the dominant sites of energy use, but also to deal with temporal mismatch between (renewable) energy generation and variations in demand. Therefore, energy transmission and ...

The Federal Energy Regulatory Commission (FERC) has defined SATOAs as an electric storage resource connected to the grid as a transmission facility solely to support the transmission system. SATOAs are not meant to participate in the Energy and Operating Reserve Markets except to the extent necessary to provide reliability services.

13 · The Forum will be administered by the American Gas Association (AGA), as recommended by the GEAR Task Force, and will include an annual readiness summit each year before winter. "The Natural Gas Readiness Forum represents a new platform for stakeholders to focus on improving reliability across the energy system," said NARUC President Fedorchak.
