

What is a Powerwall battery?

Powerwall is a compact home battery that stores energy generated by solar or from the grid. You can use this energy to power the devices and appliances in your home day and night, even during outages. With customisable power modes, you can optimise your stored energy for outage protection, electricity bill savings and more.

What is a Powerwall system?

The system learns and adapts to your energy use over time and receives over-the-air updates to add new features and enhance existing ones. Powerwall is a rechargeable home battery system that can be installed with solar. Powerwall 3 and Powerwall+ are designed for owners installing a new solar and storage system.

How many kWh does a Powerwall store?

Both Powerwall models are pretty similar in this category. They both store up to 13.5 kWh (usable), which is a common size among home batteries. These batteries don't feature a modular design either, meaning you're locked in at one capacity option per battery. If you need more than 13.5 kWh, you'll have to buy another Powerwall.

How many Powerwall 3 units can you put together?

According to Tesla, you can string together up to four Powerwall 3 units in a series, which is enough power to keep most homes running for a couple of days, even without solar power refilling the system. That said, some other brands do still offer more flexibility for making your system size larger, now or in the future.

How many kWh can a Powerwall 3 power?

With the same 13.5 kWh energy capacity, a single Powerwall 3 can power an average household for hours. For those who need more energy capacity, Powerwall 3 is also going to be easier and cheaper to stack. Tesla says that it is working on a new version of the Powerwall 3 without power inverter components to stack with a full Powerwall 3.

Can a Powerwall power a home with one unit?

Powerwall can power your home with one unit, making backup protection more affordable. Each unit is self-contained with an integrated solar inverter for added efficiency, resulting in fewer parts. This helps make multi-unit systems more affordable and system expansions easier in the future.
