

What is a 'energy fiber' based on?

A novel, all-solid-state, flexible "energy fiber" that integrated the functions of photovoltaic conversion and energy storage has been made based on titania nanotube-modified Ti wire and aligned MWCNT sheet as two electrodes. the "energy fiber" could be bent into various forms depending on the application requirement.

Why do we need flexible energy storage devices?

To achieve complete and independent wearable devices, it is vital to develop flexible energy storage devices. New-generation flexible electronic devices require flexible and reliable power sources with high energy density, long cycle life, excellent rate capability, and compatible electrolytes and separators.

What is flexible electrochemical energy storage (EES)?

As one of the essential components for flexible electronics, flexible electrochemical energy storage (EES) has garnered extensive interests at all levels of materials, devices, and systems.

Are MOF/polymer nanofiber membranes suitable for energy storage and Environmental Protection?

MOF/polymer nanofiber membranes have been widely used in energy storage and environmental protection. However, the development of MOF/polymer electrospun fiber membranes with fewer defects, higher chemical stability and lower cost brings great challenges and opportunities for future research.

What is the mechanical reliability of flexible energy storage devices?

As usual, the mechanical reliability of flexible energy storage devices includes electrical performance retention and deformation endurance. As a flexible electrode, it should possess favorable mechanical strength and large specific capacity. And the electrodes need to preserve efficient ionic and electronic conductivity during cycling.

Can a carbon fiber supercapacitor be used for energy storage?

It demonstrated a specific capacitance of 610 mF/g, energy density of 191 mWh/kg, and power density of 1508 mW/kg, showcasing its potential for energy storage applications. Han et al. developed a structural supercapacitor using a carbon fiber fabric interlaced with epoxy resin as a bipolar current collector (CC).

Metal-organic frameworks are linked by different central organic ligands and metal-ion coordination bonds to form periodic pore structures and rich pore volumes. Because of their structural advantages, metal-organic frameworks are considered to be one of the most promising candidates for new energy storage materials. To better utilize their advantages, ...

The 0.25 vol% ITIC-polyimide/polyetherimide composite exhibits high-energy density and high discharge efficiency at 150 °C (2.9 J cm⁻³, 90%) and 180 °C (2.16 J cm⁻³, 90%). This work provides a scalable design idea for high ...

Environmental-friendly electrospun phase change fiber with exceptional thermal energy storage performance
Solar Energy Materials and Solar Cells (IF 6.9) Pub Date : 2020-12-29, DOI: 10.1016/j.solmat.2020.110939

Next, the applications of MOF/polymer nanofibrous membranes in energy storage and environmental protection are summarized at length. Finally, to fully tap the potential of MOF-based nanofiber ...

Ziyan Yuan, Jingao Zheng, Xiaochuan Chen, Fuyu Xiao, Xuhui Yang, Luteng Luo, Peixun Xiong, Wenbin Lai, Chuyuan Lin, Fei Qin, Weicai Peng, Zhanjun Chen, Qingrong Qian, Qinghua Chen, Lingxing Zeng. In Situ Encapsulation of $\text{MoS}_x\text{Se}_{2-x}$ Nanocrystals with the Synergistic Function of Anion Doping and Physical Confinement with Chemical Bonding for ...

A novel, all-solid-state, flexible "energy fiber" that integrated the functions of photovoltaic conversion and energy storage has been made based on titania nanotube ...

To solve these issues and realize flexible sodium ion-based energy storage devices, researchers have electrospun many types of flexible nanofibers with active materials ...

DOI: 10.1021/acsnano.0c09146 Corpus ID: 231585765; Multifunctional Coaxial Energy Fiber toward Energy Harvesting, Storage, and Utilization. @article{Han2021MultifunctionalCE, title={Multifunctional Coaxial Energy Fiber toward Energy Harvesting, Storage, and Utilization.}, author={Jing Han and Chongyang Xu and Jintao Zhang and Nuo Xu and Yao Xiong and ...

By combining structural integrity with energy storage, these devices align with the goals of reducing environmental impact and promoting cleaner energy solutions [[5], [6], [7]]. ... Zhou et al. incorporated flexible energy storage devices into carbon fiber reinforced polymer (CFRP) to create a Composite Structural Supercapacitor (CSS). The 5:5 ...

DOI: 10.1007/s42765-022-00214-y Corpus ID: 252721739; Electrospun Metal-Organic Framework Nanofiber Membranes for Energy Storage and Environmental Protection @article{Liu2022ElectrospunMF, title={Electrospun Metal-Organic Framework Nanofiber Membranes for Energy Storage and Environmental Protection}, author={Xiaoge Liu and Yi ...

Neutral aqueous zinc ion batteries (ZIBs) have tremendous potential for grid-level energy storage and portable wearable devices. However, certain performance deficiencies of the components have limited the employment of ZIBs in practical applications. Recently, a range of pristine materials and their composites with fiber-based structures have been used to ...

Electrospinning has gained constant enthusiasm and wide interest as a novel sustainable material processing technique due to its ease of operation and wide adaptability for fabricating eco-friendly fibers on a nanoscale. In addition, the device working parameters, spinning solution properties, and the environmental factors can

have a significant effect on the ...

ENERGY & ENVIRONMENTAL MATERIALS: Volume 7, Issue 2. March 2024. ... giving rise to an N/O dual-doped hierarchically porous carbon fiber with ultrahigh specific surface area and large pore volume to serve as both anode and cathode for synchronously achieving extremely high power and energy density. ... TCMs" instability at the material level ...

The accumulation of non-biomass wastes, including anthracite, asphalt/asphaltene, synthetic polymers, petroleum coke, and tire wastes, contributes to environmental pollution. Utilizing these waste resources as precursors for activated carbon production emerges as an economical and sustainable strategy for energy storage and ...

Research on phase change material (PCM) for thermal energy storage is playing a significant role in energy management industry. However, some hurdles during the storage of energy have been perceived such as less thermal conductivity, leakage of PCM during phase transition, flammability, and insufficient mechanical properties. For overcoming such obstacle, ...

The scientific society is overwhelmed by nanostructured materials and their hybrid composites due to their intriguing, distinctive, and valuable qualities in the field of energy and environment applications [[1], [2], [3]]. A wide range of 2-D materials, including black phosphorus (BP), transition metal dichalcogenides (TMDs), layered double hydroxides (LDHs), ...

A review of flywheel energy storage systems: state of the art and opportunities. ... A composite flywheel usually includes several different materials such as carbon fiber, glass fiber, and epoxy. ... In [77], a flywheel is used to store excess energy from a PV-diesel hybrid energy system. Its economic and environmental benefits are studied. 3.1.3.

The low electrical conductivity of electrospun nanofibers, coming from the otherness of spinning solution and the lower degree of fiber orientation, is the major stumbling block for advanced energy storage materials, and improving the spinning collection device is a good way to solve this shortage [32], [145], [146].

Here, a multifunctional coaxial energy fiber has been developed toward energy harvesting, energy storage, and energy utilization. The energy fiber is composed of an all fiber ...

Energy storage Flywheel Renewable energy Battery Magnetic bearing A B S T R A C T Thanks to the unique advantages such as long life cycles, high power density, minimal environmental impact, and high power quality such as fast response and voltage stability, the flywheel/kinetic energy storage system (FESS) is gaining attention recently.

In this review, we discuss the research progress regarding carbon fibers and their hybrid materials applied to various energy storage devices (Scheme 1). Aiming to uncover the great importance of carbon fiber materials

for promoting electrochemical performance of energy storage devices, we have systematically discussed the charging and discharging principles of ...

[12, 13] Compared to the conventional energy storage materials (such as carbon-based materials, conducting polymers, metal oxides, MXene, etc.), nanocellulose is commonly integrated with other electrochemically active materials or pyrolyzed to carbon to develop composites as energy storage materials because of its intrinsic insulation ...

[Request PDF](#) | Environmental-friendly electrospun phase change fiber with exceptional thermal energy storage performance | Electrospun phase change fiber (PCF) releases more than 85 wt% of organic ...

The single fiber energy-storage systems can be woven into the fabric-shaped devices and combined with other fiber sensors. In this section, fiber-based electrochemical energy-storage systems, such as fiber-based batteries and supercapacitors, are reviewed. Their main features are summarized in Table 3.

A need for lightweight energy storage technology is fueling the development of carbon fiber composite materials for car batteries and other electronics. ... environmental and structural testing -- and then partner with the customer through platform evaluation. ... construct the SSC distinguishes the project from similar concurrent work ...

Sisal fiber exhibits a fibrous and porous structure with significant surface roughness, making it highly suitable for storing phase change materials (PCMs). Its intricate morphology further aids in mitigating the risk of PCM leakage. This research successfully employs vacuum adsorption to encapsulate paraffin within sisal fiber, yielding a potentially cost ...

Phase change fibers, fibers that contain phase change materials (PCMs), can help create a comfortable microclimate with almost constant temperature through storing and releasing a large amount of thermal energy during the reversible phase-transition of PCMs [[1], [2], [3]].Phase change fibers have attracted much attention for temperature regulation, heat ...

Fibrous energy-autonomy electronics are highly desired for wearable soft electronics, human-machine interfaces, and the Internet of Things. How to effectively integrate various functional energy fibers into them and realize versatile applications is an urgent need to be fulfilled. Here, a multifunctional coaxial energy fiber has been developed toward energy ...

As the demand for flexible wearable electronic devices increases, the development of light, thin and flexible high-performance energy-storage devices to power them is a research priority. This review highlights the latest research advances in flexible wearable supercapacitors, covering functional classifications such as stretchability, permeability, self ...

A new type of integrated power fiber that incorporates a dye-sensitized solar cell (DSSC) and a supercapacitor

(SC), which can be used for energy conversation and storage, was introduced for the first time. A stainless steel wire coated with polyaniline via anodic deposition is jointly used as the electrode of the fiber DSSC and fiber SC. The overall energy conversion ...

Since most wearable electronic devices come into contact with the human body, textiles are considered suitable for daily and long-term applications [9], [10], [11], [12]. Recently, fiber-shaped energy storage devices (FESDs) such as fiber batteries and fiber supercapacitors [13], [14], [15], with advantages of miniaturization, flexibility, and permeability, have the ...

S-S phase change fibers with enhanced heat energy storage density have been successfully fabricated from coaxial wet spinning and subsequent polymerization-crosslinking. ...
