Amber Kinetics will improve the

A Li-ion battery has a specific energy of 100-265 Wh/kg, 16-44 times higher. So the flywheel solution needs far more weight to store the same energy. And this is all dead weight: it has to be carried to orbit, and can't be jettisoned on the way up. I also can't see a way to use part of the rocket as flywheel mass without causing complications.

In electric vehicles (EV) charging systems, energy storage systems (ESS) are commonly integrated to supplement PV power and store excess energy for later use during low generation and on-peak periods to mitigate utility grid congestion.
