

What is energy storage?

Energy storage involves converting energy from forms that are difficult to store to more conveniently or economically storable forms. Some technologies provide short-term energy storage, while others can endure for much longer. Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped.

Why is energy storage important?

Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.

How can energy be stored?

Energy can also be stored by making fuels such as hydrogen, which can be burned when energy is most needed. Pumped hydroelectricity, the most common form of large-scale energy storage, uses excess energy to pump water uphill, then releases the water later to turn a turbine and make electricity.

Why is underground gas storage important?

Gas storage, in particular Underground Gas Storage (UGS), is instrumental to the security of supply as it provides an additional reserve in case of strong demand or supply disruptions. Typically, storage provides 25-30% of gas consumed in the EU during winter; it reduces the need to import additional gas and contributes to absorbing supply shocks.

Why is gas storage important in the EU?

Typically, storage provides 25-30% of gas consumed in the EU during winter; it reduces the need to import additional gas and contributes to absorbing supply shocks. The EU experienced a prolonged period of volatile and high energy prices in 2021 due to lower-than-usual storage filling levels, among many factors.

How does energy storage work?

Pumped hydroelectricity, the most common form of large-scale energy storage, uses excess energy to pump water uphill, then releases the water later to turn a turbine and make electricity. Compressed air energy storage works similarly, but by pressurizing air instead of water.
