

Often these motors are paired with a gearbox, as without one the shaft speed of the DC motor can exceed application requirements. A DC motor's shaft speed can be in the region of 1500-6000 RPM and the gearbox can control and reduce the shaft speed making the motor and the application more reliable, as well as increasing the torque output.

1. Flywheel Energy Storage Systems. One type of energy storage system compatible with DC motors is the flywheel energy storage system.
