operating. The Home Hub inverter has an AC relay located internally. It will isolate the inverter from the generator while the generator is operating. This connection method considers the generator as an auxiliary backup system to the PV + Storage system. The inverter firmware needs to be at least 4.17.xx for this capability.

The main difference with energy storage inverters is that they are capable of two-way power conversion - from DC to AC, and vice versa. It's this switch between currents that enables energy storage inverters to store energy, as the name implies. In a regular PV inverter system, any excess power that you do not consume is fed back to the grid.

All inverter generators will make noise while they're running, but some are louder than others. If you want a quiet inverter generator, look for one with noise-suppression technology that brings its noise level down to 50 or 60 decibels. Fuel Source. Inverter generators are either gas-powered or powered by propane.
