The major advantage of SMES is its high power density which enables it to easily scale up to tens of MW or even hundreds of MW from small energy storage unit [53]. The drawbacks of SMES are its low energy density and short discharge time in comparison to flywheels and SCs, which leads to a requirement for more space.

As evident from Table 1, electrochemical batteries can be considered high energy density devices with a typical gravimetric energy densities of commercially available battery systems in the region of 70-100 (Wh/kg).Electrochemical batteries have abilities to store large amount of energy which can be released over a longer period whereas SCs are on the other ...
