

What are high voltage fuses?

High voltage fuses are those connected into power and/or auxiliary circuits with a nominal voltage between 600 V DC and 3 000 V DC, according to IEC 61287-1:2014. These fuses can also be used in auxiliary AC circuits with a nominal voltage up to 1 500 V.

Why do energy storage systems need special fuse inserts?

More energy storage systems are installed globally every day. Present-day battery systems often reach power outputs of several hundred MWh. That requires advanced protection using special fuse inserts. They have to dramatically reduce the current in response to a short circuit and interrupt it very quickly as well.

Why do batteries need fuses?

Modern-day battery and energy storage systems place huge demands on fuses. Constantly rising power levels at maximum DC voltages of 1500 V can generate short-circuit currents of several hundred kiloamperes. Another issue relates to load profiles produced by a wide variety of loading and unloading cycles.
