Thus, pumped storage plants can operate only if these plants are interconnected in a large grid. Principle of Operation. The pumped storage plant is consists of two ponds, one at a high level and other at a low level with powerhouse near the low-level pond. The two ponds are connected through a penstock. The pumped storage plant is shown in fig. 1.

Grid-Scale Battery Storage . A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide

electricity or other grid services when needed.
