

What is Kyoto Group's heatcube thermal energy storage solution?

Oslo, Norway 27 October 2022 - Kyoto Group today launched the second generation of the Heatcube thermal energy storage solution, offering up to five times higher energy density, lower cost and construction optimization.

What is heatcube?

Heatcube; a long duration thermal energy storage solution with a molten-salt based modular system that enables industry to decarbonize process heat.

Why should you use heatcube?

Use Heatcube to run production without producing CO₂. No emissions mean another saving - no additional CO₂ taxes. Heat stored means it is available when you need it. With a secure energy supply, fluctuations in the energy market have less impact, leaving pricing margins safe from political influence. Charge with electricity from renewables.

How does heatcube work?

Renewable energy sources, like wind and solar, are intermittent suppliers. Heatcube is the solution to stabilizing this supply to meet mass industrial demand. Simultaneous charging and discharging: the molten salt circulation system is designed for separate charging (electrical heating) and discharging (steam generation).

How long does heatcube last?

Charge and discharge heat in the form of steam, using molten salt. The world's most mature thermal storage medium. Few moving parts, and predictable degradation over time makes expected lifetime of Heatcube 20-30 years. Heatcube uses a well known resistive heater technology, and stores energy from heat at up to 90% efficiency.

Why is heatcube a prestigious Solar Impulse efficient solution label?

Our flagship product, Heatcube, has earned the prestigious Solar Impulse Efficient Solution Label, which recognizes clean, profitable solutions with the potential to tackle today's pressing environmental challenges.
