What is Kyoto Group's heatcube thermal energy storage solution?

Oslo, Norway 27 October 2022 - Kyoto Group today launched the second generation of the Heatcube thermal energy storage solution, offering up to five times higher energy density, lower cost and construction optimization.

What is heatcube?

Heatcube; a long duration thermal energy storage solution with a molten-salt based modular system that enables industry to decarbonize process heat.

Why should you use heatcube?

Use Heatcube to run production without producing CO₂. No emissions mean another saving - no additional CO₂ taxes. Heat stored means it is available when you need it. With a secure energy supply, fluctuations in the energy market have less impact, leaving pricing margins safe from political influence. Charge with electricity from renewables.

How does heatcube work?

Renewable energy sources, like wind and solar, are intermittent suppliers. Heatcube is the solution to stabilizing this supply to meet mass industrial demand. Simultaneous charging and discharging: the molten salt circulation system is designed for separate charging (electrical heating) and discharging (steam generation).

How long does heatcube last?

Charge and discharge heat in the form of steam, using molten salt. The world's most mature thermal storage medium. Few moving parts, and predictable degradation over time makes expected lifetime of Heatcube 20-30 years. Heatcube uses a well known resistive heater technology, and stores energy from heat at up to 90% efficiency.

Why is heatcube a prestigious Solar Impulse efficient solution label?

Our flagship product, Heatcube, has earned the prestigious Solar Impulse Efficient Solution Label, which recognizes clean, profitable solutions with the potential to tackle today's pressing environmental challenges.

Hero Future Energies provides Energy Cube both in Capex mode as well as Opex mode. The various applications where Energy Cube can add value are as follows: 1. Utility-Scale Energy Storage HFE's utility-scale energy storage solutions provide reliable and efficient storage for renewable energy generated from wind and solar power plants.

As a global pathfinder, leader and expert in battery energy storage system, BYD Energy Storage specializes in the R& D, manufacturing, marketing, service and recycling of the energy storage products. ... Cube Pro . Top-tier liquid cooling battery energy storage system that has passed UL9540A and IEC62619 tests right from the start.

The EP Cube energy storage system can store up to 19.9 kilowatt-hours of energy, comes with an integrated inverter, and can be installed with or without solar. ... *Based on 16.6 kWh EP Cube system. Our experts estimate that a 16.6 kWh Canadian Solar EP Cube solar battery installation would cost about \$15,200, including installation costs. ...

Thermal energy storage makes it possible to deliver solar around the clock by storing solar as heat during the day and discharging the heat as steam to produce thermal power at night. ... The Heatcube uses a series of modular tanks to store energy in molten salts that go from cold to hot between 170°C and 500°C. Instead of the two molten ...

In 2022, we introduced our first residential energy storage system, EP Cube, a flexible and intelligent all-in-one solution designed to assist individuals in efficiently managing solar power generation, residential energy storage, and electricity usage. Our goal is to reduce electricity costs and minimize carbon footprints.

The all-in-one design allows EP Cube to apply various home scenarios and simplifies transport and installation. EP Cube also adopts a stackable modular design to meet homeowners' specific energy needs, offering capacity options ranging from 6.6kWh to 19.9kWh. As a power guarantee, EP Cube impresses both stakeholders and customers.

Stable and safe: highly suitable for thermal energy storage. Molten salts are an ionic compound solid at room temperature and atmospheric pressure, but liquid when heated above its melting point. [2] Molten salts are often used as a heat transfer fluid and thermal energy storage solution in concentrating solar power (CSP) plants.
