How does a hydrogen hot rod work?

The modern hydrogen hot rod is powered by a nano bubble water-fuel / cell that converts distilled water into a positive charge nano bubble water to power the vehicle's motor with more force than heat so thus is not carnot cycle.

Are hydrogen-powered hot rods a good idea?

Hydrogen-powered hot rods would be a way to satisfy both government regulators and enthusiasts. Copeland says the cost of parts right now may be prohibitive but would come down as volumes increase. Likewise the availability of hydrogen, currently restricted to 50 or 60 retail outlets in California, would need to grow.

How smart is a cooling cable?

Building it into a cable is clever enough in the first place, given the cable needs to flex but Ford and Purdue's research has also got a stage smarter than anything else around so far. The cooling agent that the cable uses switches between being a liquid and vapor, which is a heat-reductive process.
