A higher UEF means a water heater is more energy efficient and will cost less to operate compared to other water heaters in the same bin. A water heater's UEF can only be compared with water heaters within the same bin. The higher the uniform energy factor, the more efficient the water heater.

Depending on the household's usage of hot water, storage tank models could be a more cost-effective option. ... Standby heat loss is a big factor in higher energy costs and efficiency in storage ...

As hot water is heated to 60degC, so a 120-litre cylinder of 60degC hot water will provide 180 litres of useable hot water at 40degC. In theory, enough to supply a 4-person household. So much comes down to occupancy however. Households can be big hot water users (50-70 litres per day) or small hot water users (20-30 litres per day).

There are a few different types of venting options that can be used for gas tank water heaters. Electric tank water heaters are energy-efficient solutions for your home's water heating needs. A. O. Smith's electric tank water heaters have a UEF rating between .89 and 3.45, helping you save energy in your home.

Reliable Storage Supply. Tank water heaters work hard to make hot water available when you need it by consistently storing a supply. Built to Last. State water heaters are designed to be long-lasting. With limited warranties that range from 6 to 10 years, they help deliver hot water to your home for years to come.
