Potential energy and kinetic energy. Although there are many kinds of energy in the world, they all fall into two broad categories: potential energy and kinetic energy.When energy is stored up and waiting to do things, we call it potential energy; "potential" simply means the energy has the ability to do something useful later on.

Solar energy is the most promising and permanent energy source due to its large magnitude received on earth daily. The effective use of this energy source is relied on developing inexpensive, stable, and clean storage and harvesting devices. The harvesting technologies can capture and convert energy into forms that the systems can use.

Thermal energy storage (TES) systems can store heat or cold to be used later, at different temperature, place, or power. The main use of TES is to overcome the mismatch between energy generation and energy use (Mehling and Cabeza, 2008, Dincer and Rosen, 2002, Cabeza, 2012, Alva et al., 2018). The mismatch can be in time, temperature, power, or ...
