Most smartphones nowadays have pretty decent cameras and loads of extra tools you can use to record high-quality and professional video content. Of course, having a camera isn't the only requirement for creating top-quality content, it takes skill and knowledge. Read on for our ultimate guide to shooting epic videos with your phone.

But if you're shooting video for the purpose of editing or sharing it later, holds your phone horizontally. Just think of the shape of the TV or computer. If people watch your video on there, you want it to fill the screen. Always shoot horizontally. Another cool feature, if you have a newer phone, is the ability to shoot time lapse video and ...

In previous posts in our Solar + Energy Storage series we explained why and when it makes sense to combine solar + energy storage and the trade-offs of AC versus DC coupled systems as well as co-located versus standalone systems.. With this foundation, let's now explore the considerations for determining the optimal storage-to-solar ratio.

Any iPhone from the past several years offers basic video-recording options, though the premium Pro and Pro Max editions up the game with advanced video features. You can shoot a video at ...

Product videos. Not necessarily a new trend, rather one that continues to grow, more brands are using product videos. In fact, 89% of people say watching a video has convinced them to make a purchase. Like 360-degree

How to shoot videos of energy storage products

images, videos give shoppers a more complete view of the product. They can also see it in action, quite literally.

A digital mirrorless or DSLR camera that can shoot at least Full HD would be a major step up from shooting with a smartphone or laptop camera. However, be sure to check max recording time and data storage options -- both can max out with many prosumer digital cameras if you're recording long-form videos.

We've collected some of the best renewable energy documentaries on Netflix, , and hand-picked videos from pre-eminent thought leaders and video podcasters. ...

This is your moving platform base, which you use to turn the product and shoot 360 photography. The ideal diameter should be at least 12 inches to fit bigger items. Copco sells well-made, cheap turntables. 2. Fabric Tape Measure and Pen. The markings on a fabric tape measure let you move your turntable at precise increments while shooting. And ...

Although Chazelle wasn't "inspired" to make an iPhone film per se, he tackled the project with a lot of ambition. Chazelle's short The Stunt Double is a vertical film (framed in a vertical aspect ratio rather than a horizontal one).. I think most filmmakers would agree that the vertical aspect ratio isn't, how do I say, the best choice - but at least Chazelle was creative ...

Creating professional product videos doesn't have to be complicated or expensive. With the right techniques and equipment, you can shoot impressive product videos right from the comfort of your own home. In this guide, we will cover everything you need to know about shooting product videos, from optimising lighting to camera setup and video ...

Energy storage is poised to become a key piece of a flexible, resilient, and low-carbon U.S. future power grid. To understand how super-high levels of storage could impact power system...

The U.S. Energy Storage Association assumes no responsibility or liability for the use of this document. ... at the start, in designing products for more economic refurbishment or recycling, or for a longer service life that reduces the need for energy and material inputs for manufacture of new products.

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.

A viral video recently discussed the age-old question "why don't we shoot nuclear waste into space?". It's a topic we often get asked about on social media. While the educational video's cartoonish depictions of nuclear waste as glowing green ooze made some of our subject matter experts cringe, it's clear that the content

creators did their homework.
