What is the Enphase enpower™ smart switch?

The Enphase Enpower™ smart switch connects the home to grid power, the Encharge storage system, and solar PV. It provides microgrid interconnection device (MID) functionality by automatically detecting and seamlessly transitioning the home energy system from grid power to backup power in the event of a grid failure.

What is Enpower smart switch?

Introduction Enpower smart switch The Enpower smart switch senses when the grid goes down and seamlessly transitions the home from grid power to backup power. Enpower disconnects the grid and powers the backup loads using the Encharge storage system, PV system, and the electrical service panel that houses the circuits.

How much power does a smart switch need?

However, in their documentation they suggest that an LED load of around 5W is the minimum which can provide sufficient leakage current to power the electronics of the smart switch in the 'off' state.

Can a third-party transfer switch be used with a generator?

Such third-party transfer switches and accompanying generators cannot operate at the same time as IQ batteries and charge them. Note that M-Series, Microinverter-based Enphase Energy Systems, when used with a generator, require all PV to be wired via an external contactor.

Can a third-party transfer switch be connected to the iQ system controller?

Third-party transfer switches and unqualified generators may be connected on the load side of the IQ System Controller in compliance with NEC 705.2 and require isolating the Enphase DER equipment from the electrical system powered by unqualified generators.

Can IQ8 PV be added to a stand-alone supply?

In an IQ8 PV system, the IQ8 PV capacity can be added to the stand-alone supply of the system to meet 2017 NEC 690.10 / 2020 NEC 710.15(A). However, since the solar resource is highly variable, Enphase recommends a safety margin to improve customer experience. 30% of the PV AC apparent power is suggested as a starting point for design.
