

What are the benefits of energy storage?

There are four major benefits to energy storage. First, it can be used to smooth the flow of power, which can increase or decrease in unpredictable ways. Second, storage can be integrated into electricity systems so that if a main source of power fails, it provides a backup service, improving reliability.

How can energy storage help the electric grid?

Three distinct yet interlinked dimensions can illustrate energy storage's expanding role in the current and future electric grid--renewable energy integration, grid optimization, and electrification and decentralization support.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Why do companies invest in energy-storage devices?

Historically, companies, grid operators, independent power providers, and utilities have invested in energy-storage devices to provide a specific benefit, either for themselves or for the grid. As storage costs fall, ownership will broaden and many new business models will emerge.

How can energy storage improve reliability?

These are characterized by poor security of supply, driven by a combination of insufficient, unreliable and inflexible generation capacity, underdeveloped or non-existent grid infrastructure, a lack of adequate monitoring and control equipment, and a lack of maintenance. In this context, energy storage can help enhance reliability.

How does energy storage work?

Energy storage can be used to lower peak consumption (the highest amount of power a customer draws from the grid), thus reducing the amount customers pay for demand charges. Our model calculates that in North America, the break-even point for most customers paying a demand charge is about \$9 per kilowatt.
