What is a butterfly valve? A butterfly valve is a control valve that regulates fluid flowing through a section of pipe. This valve is similar to a ball valve in operation, with a quick shut-off feature. A butterfly valve has a disc mounted to a rotating stem. When the valve is fully closed, the disc blocks the fluid flow.

Hydraulic control systems of butterfly valves are presently valve-controlled and pump-controlled. Valve-controlled hydraulic systems have serious power loss and generate much heat during throttling.
