This allows for greater flexibility in the distribution and storage of energy, which can enhance energy security by reducing the vulnerability of the energy system to disruptions.

Can hydrogen be stored as a gas or a liquid?

Hydrogen can be stored physically as either a gas or a liquid. Storage of hydrogen as a gas typically requires high-pressure tanks (350-700 bar [5,000-10,000 psi] tank pressure). Storage of hydrogen as a liquid requires cryogenic temperatures because the boiling point of hydrogen at one atmosphere pressure is -252.8°C.
