Solar PV Power Plants with Large-Scale Energy Storage. Large-scale solar power plants often use energy storage systems to store excess solar energy generated during the day. This stored energy can be released to the grid as needed, particularly during periods of peak demand or when solar generation is low.

To be competitive with legacy power plants, Chiang's method had to come in at around \$20 per kilowatt-hour of stored energy -- one-tenth the cost of lithium-ion battery storage. But how to transition from expensive batteries that store and discharge over a couple of hours to some as-yet-undefined, cheap, longer-duration technology?
