

Are energy harvesting and energy recovery important in the design of electric vehicles?

Abstract: This review article examines the crucial role of energy harvesting and energy recovery in the design of battery electric vehicles (BEVs) and fuel cell hybrid electric vehicles (FCHEVs) as these vehicles have limited onboard power sources.

How can a drive power unit improve the performance of a vehicle?

The drive power unit composed of multiple energy sources can adequately utilize the characteristics of various energy sources to enhance the overall performance of the vehicle, and this composition can not only reduce the manufacturing cost of the vehicle to a certain extent but also provide ideas for the optimization of the vehicle energy system.

What is the importance of batteries for energy storage and electric vehicles?

The importance of batteries for energy storage and electric vehicles (EVs) has been widely recognized and discussed in the literature. Many different technologies have been investigated, , . The EV market has grown significantly in the last 10 years.

Why is energy storage integration important for PV-assisted EV drives?

Energy storage integration is critical for the effective operation of PV-assisted EV drives, and developing novel battery management systems can improve the overall energy efficiency and lifespan of these systems. Continuous system optimization and performance evaluation are also important areas for future research.

How important is energy technology for vehicles?

A review of articles on energy technology over the past decade reveals an increasing trend year by year, which indicates that the role of energy technology for vehicles is becoming more and more important. Therefore, this paper analyzes and researches the energy technology of BEVs.

Can energy storage systems be used for EVs?

The emergence of large-scale energy storage systems is contingent on the successful commercial deployment of TES techniques for EVs, which is set to influence all forms of transport as vehicle electrification progresses, including cars, buses, trucks, trains, ships, and even airplanes (see Fig. 4).

1 Introduction. Lithium-ion batteries (LIBs) have long been considered as an efficient energy storage system on the basis of their energy density, power density, reliability, and stability, which have occupied an irreplaceable position in the study of many fields over the past decades. [] Lithium-ion batteries have been extensively applied in portable electronic devices and will play ...

The new car batteries that could power the electric vehicle revolution. Researchers are experimenting with

different designs that could lower costs, extend vehicle ranges and offer...

According to data of "Recommended models catalogue for promotion and application of new energy vehicles" released by the Ministry of Industry and Information Technology in 2019, ... CTP technology is proposed for lithium-ion battery packing to increase the energy storage density, which can increase up to 30%. ...

Thermal Energy Storage (TES) systems are pivotal in advancing net-zero energy transitions, particularly in the energy sector, which is a major contributor to climate change due to carbon emissions. In electrical vehicles (EVs), TES systems enhance battery performance and regulate cabin temperatures, thus improving energy efficiency and extending vehicle ...

Energy storage is important because it can be utilized to support the grid's efforts to include additional renewable energy sources []. Additionally, energy storage can improve the efficiency of generation facilities and decrease the need for less efficient generating units that would otherwise only run during peak hours.

In this paper, NEV is defined as the four-wheel vehicle using unconventional vehicle fuel as the power source, which includes hybrid vehicle (HV), battery electrical vehicle (BEV), fuel cell electric vehicle (FCEV), hydrogen engine vehicle (HEV), dimethyl ether vehicle (DEV) and other new energy (e.g. high efficiency energy storage devices ...

According to the changes in the voltage technology trend of onboard energy storage systems for vehicles of different types (Fig. 3.20), the voltage of energy storage systems for passenger cars and buses is increasing, especially the passenger cars, whose energy storage system in 2020 had a voltage 15.1% higher than that in 2019, i.e., 335.2 V ...

China is rapidly accelerating the transition to EVs in terms of production and deployment. In 2017, it surpassed Europe and the USA, becoming the largest market in EV sales worldwide (IEA, 2019c). The country initially perceived new energy vehicles (NEVs; including BEVs, PHEVs, and hydrogen-powered fuel cell electric vehicles [FCEVs]) as a means to serve ...

Energy management strategy is one of the main challenges in the development of fuel cell electric vehicles equipped with various energy storage systems. The energy management strategy should be able to provide the power demand of the vehicle in different driving conditions, minimize equivalent fuel consumption of fuel cell, and improve the ...

The roadmap is a comprehensive set of recommendations to expand New York's energy storage programs to cost-effectively unlock the rapid growth of renewable energy across the state and bolster grid reliability and customer resilience. ... including requiring all new passenger cars and light-duty trucks sold in the State be zero emission by 2035 ...

Putting the electric energy storage braking energy recovery system into use can not only reduce the fuel consumption of the car, improve the driving performance of the car, but also improve the safety and environmental protection of the vehicle, and to a certain extent, protect the health of the traveler.

Energy storage integration is critical for the effective operation of PV-assisted EV drives, and developing novel battery management systems can improve the overall energy ...

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...

Hybrid energy storage systems (HESS) are used to optimize the performances of the embedded storage system in electric vehicles. The hybridization of the storage system separates energy and power sources, for example, battery and supercapacitor, in order to use their characteristics at their best. This paper deals with the improvement of the size, efficiency, or cost of the ...

With increasing global attention to climate change and environmental sustainability, the sustainable development of the automotive industry has become an important issue. This study focuses on the regenerative braking issues in pure electric vehicles. Specifically, it intends to elucidate the influence of the braking force distribution of the front and rear axles ...

Rechargeable batteries, which represent advanced energy storage technologies, are interconnected with renewable energy sources, new energy vehicles, energy interconnection and transmission, energy producers and sellers, and virtual electric fields to play a significant part in the Internet of Everything (a concept that refers to the connection of virtually everything in ...

Electric car sales neared 14 million in 2023, 95% of which were in China, Europe and the United States. Almost 14 million new electric cars¹ were registered globally in 2023, bringing their total number on the roads to 40 million, closely tracking the sales forecast from the 2023 edition of the Global EV Outlook (GEVO-2023). Electric car sales in 2023 were 3.5 million higher than in ...

FCV, PHEV and plug-in fuel cell vehicle (FC-PHEV) are the typical NEV. The hybrid energy storage system (HESS) is general used to meet the requirements of power density and energy density of NEV [5]. The structures of HESS for NEV are shown in Fig. 1. HESS for FCV is shown in Fig. 1 (a) [6]. Fuel cell (FC) provides average power and the super capacitor (SC) ...

The implementation of hydrogen Fuel Cells (FCs) as energy storage solution for EVs is another approach to reduce charging times and increase the range of the vehicle [14]. Furthermore, hydrogen can be produced from sterilized water through renewable energy sources and consequently, can be seen as a clean fuel.

The guideline, jointly released by four authorities including the NDRC and the National Energy Administration, aims to give full play to NEVs' important role in electrochemical energy storage system, consolidate and expand NEVs development advantages, and support the construction of new energy system and new power system.

With the rapid growth of the global population, air pollution and resource scarcity, which seriously affect human health, have had an increasing impact on the sustainable development of countries [1]. As an important sustainable strategy for alleviating resource shortages and environmental degradation, new energy vehicles (NEVs) have received ...

Conventional fuel-fired vehicles use the energy generated by the combustion of fossil fuels to power their operation, but the products of combustion lead to a dramatic increase in ambient levels of air pollutants, which not only causes environmental problems but also exacerbates energy depletion to a certain extent [1] order to alleviate the environmental ...

In recent years, with the high awareness of the Chinese government on environmental protection, and support to the development of new energy, new energy vehicles have got developed to a certain ...

New energy vehicles (NEVs) are vehicles that use a new type of power system and are driven entirely or mainly by new energy sources, which can be divided into hybrid electric vehicles (HEVs), electric vehicles (EVs), fuel cell electric vehicles (FCEVs), and other vehicles using new energy sources (hydrogen, dimethyl ether, etc.) (Ma et al ...

The transportation industry plays a key role in reducing urban emissions of air pollutants and energy consumption. The transition from traditional fossil fuel-based vehicles (TFFBVs) to new energy vehicles (NEVs) is critical to China's strategic goal of reaching peak carbon dioxide (CO₂) emissions before 2030 and achieving carbon neutrality before 2060. On ...

New energy electric vehicles will become a rational choice to achieve clean energy alternatives in the transportation field, and the advantages of new energy electric vehicles rely on high energy storage density batteries and efficient and fast charging technology. This paper introduces a DC charging pile for new energy electric vehicles. The DC charging pile ...

1.1.2 Current Marketing of NEVs in China (1) Remarkable achievements of china in vehicle electrification, with rapid growth in NEV market in 2022. China's NEV industry has ushered in an era of rapid development in large scale, proved by its soaring market penetration curve (Fig. 1.3) 2022, China sold 6.887 million NEVs, an increase of 93.4% year on year, ...

Lithium-ion batteries (LIBs), while first commercially developed for portable electronics are now ubiquitous

in daily life, in increasingly diverse applications including electric cars, power ...

The rapid growth of the electric vehicle (EV) market has fueled intense research and development efforts to improve battery technologies, which are key to enhancing EV performance and driving range.

Electric vehicles (EVs) encounter substantial obstacles in effectively managing energy, particularly when faced with varied driving circumstances and surrounding factors. This study aims to evaluate the performance of three different control systems in a fully operational hybrid energy storage system (HESS) installed in the Nissan Leaf. The objective is to improve ...

The combination of batteries and supercapacitors (known as a hybrid energy storage system or HESS) offers the potential to address the power and energy density requirements of LEVs more ...

In 2013, the Notice of the State Council on Issuing the Development Plan for Energy Conservation and New Energy Vehicle Industry (2012-2020) required the implementation of average fuel consumption management for passenger car enterprises, gradually reducing the average fuel consumption of China's passenger car products, and achieving the goal of ...

Accordingly, the effectiveness of the heating suppression for battery energy storage system becomes an essential issue for maintaining the reliability and stability of new energy vehicles ...
