How much energy does Iraq use?

Iraq's total final energy consumption in 2018 was 22,552 ktoe (IEA, 2020a). Regarding the energy consumption by sector, the transport sector dominated accounting for 50%, followed by households (24%), industry (19%), and others (7%) (IEA, 2020a) (Fig. 4-1). The energy mix was predominantly made up of fossil fuels (Fig. 4-2).

Is Iraq in the pre-phase of the energy transition model?

As a result, renewable energy resources are a long way from replacing fossil fuels, such as oil and gas, in the energy mix. Accordingly, Iraq can be classified as being in the pre-phase of the energy transition model. Table 4-2 summarises important energy transition indicators in Iraq and compares them across several years.
