Are lithium ion batteries good for stationary energy storage?

As of 2023 [update], LiFePO₄ is the primary candidate for large-scale use of lithium-ion batteries for stationary energy storage (rather than electric vehicles) due to its low cost, excellent safety, and high cycle durability. For example, Sony Fortelion batteries have retained 74% of their capacity after 8000 cycles with 100% discharge. [99]

What are lithium-ion batteries used for?

Not only are lithium-ion batteries widely used for consumer electronics and electric vehicles, but they also account for over 80% of the more than 190 gigawatt-hours (GWh) of battery energy storage deployed globally through 2023.

Why are lithium ion batteries better than other batteries?

Lithium-ion batteries have higher voltage than other types of batteries, meaning they can store more energy and discharge more power for high-energy uses like driving a car at high speeds or providing emergency backup power. Charging and recharging a battery wears it out, but lithium-ion batteries are also long-lasting.
