What is a fake oil payment scam & how does it work?

To support the scam, fake government, associations, banks, law firms, tank terminals, shipping companies, and due diligence websites are also set up. The purpose is to induce the victim into paying advance fees for non-existent oil or other commodities. Fake documents are sent to the potential victim as further inducement.

How do oil scams work?

The purpose is to induce the victim into paying advance fees for non-existent oil or other commodities. Fake documents are sent to the potential victim as further inducement. Many scammers will request an advance payment or fee amounting to a large sum of money, before any oil is delivered, since, of course, no oil will ever be delivered.

Is storage ESS economically viable?

Economics of storage ESS are gaining significance within the contemporary energy domain, encompassing various utilities such as grid stabilization and the integration of renewable energy sources. The economic viability of these systems, however, remains a key concern for their widespread adoption.

Does GES outperform other energy storage technologies?

They demonstrated that the GES system outperforms alternative storage technologies such as PHES and compressed air energy storage (CAES) in terms of operational and economic performance. Berrada and Loudiyi evaluated the acceptable materials that can be applied to the various components of the storage system.

Are energy storage systems a good choice?

Thus to account for these intermittencies and to ensure a proper balance between energy generation and demand, energy storage systems (ESSs) are regarded as the most realistic and effective choice, which has great potential to optimise energy management and control energy spillage.

Is energy storage cost-effective?

Through simulation, it was found that the cost-effectiveness of energy storage depends remarkably on both the round-trip efficiency and power-to-energy ratio of the battery storage, highlighting their importance. A comprehensive evaluation and design of ESS software tools were conducted by Nguyen and Byrne (2021).
