

Fuel Cells as an energy source in the EVs. A fuel cell works as an electrochemical cell that generates electricity for driving vehicles. Hydrogen (from a renewable source) is fed at the Anode and Oxygen at the Cathode, both producing electricity as the main product while water and heat as by-products. Electricity produced is used to drive the ...

This paper focuses on the energy and economic analysis of the Building To Vehicle To Building (V2B 2) concept, conducted through a comprehensive parametric and sensitivity analysis. The idea behind this novel vehicle to building energy management is to exploit the use of electric vehicles as energy vectors to exchange electricity among buildings with the ...

In this paper, a dynamic model of a hybrid energy storage system composed by a LiFePO₄ battery and a supercapacitor, coupled to eight regenerative electro-mechanical actuators (r ...

Rapidly controllable energy storage systems such as the system at the Leipzig plant also play an important role in the energy market. The stationary battery storage system ...

The Institute of Vehicle Concepts researches, develops and evaluates new vehicle concepts and technologies in light of future demands on the transportation system. ... Our vision is an efficient and effective mobility - based on renewable energy sources, energy storage and advanced construction methods and material applications as well as ...

It calculates volumes of energy self-consumed, shared, and withdrawn from the grid. When the storage is added, it also estimates energy stored by a battery system and its losses. The model results encapsulate the economics resulting from the Italian Energy Market prices and current incentives schemes, and financial Key Performance Indicators (KPI).

Thermal energy storage for electric vehicles at low temperatures: Concepts, systems, devices and materials ... The heat storage concepts, devices and systems proposed and developed for EVs are then reviewed, and potential TES materials for different types of TES devices are discussed. ... Thermal and economic analysis on vehicle energy ...

Thermal Energy Storage (TES) systems are pivotal in advancing net-zero energy transitions, particularly in the energy sector, which is a major contributor to climate change due to carbon emissions. In electrical vehicles (EVs), TES systems enhance battery performance and regulate cabin temperatures, thus improving energy efficiency and extending vehicle ...

The V2G process is regarded as promising but not absolutely essential. However, it could transform the

energy industry in the future. No one has yet explained how a power grid that can no longer rely on nuclear or coal-fired power stations will be able to maintain its stability when millions of additional electricity consumers appear on roads all over the world.

The proposed ideas were applied in a concept facility located in Campinas, Brazil, in a structure equipped with two 50 kW DC Fast Chargers, local 12.5 kW/13.2 kWp PV generation (to reduce energy ...

It is known that the energy storage and external circuit are connected by the interface circuit. For the active control topology, the current researches mainly focus on the battery side with the boost converter to realize the classic DC bus voltage regulation research and the supercapacitor side with the bidirectional DC/DC converter is regarded as the auxiliary ...

As shown in Fig. 1.5, the reader's view will expand from the flywheel energy storage system per se to an analysis of the supersystem, which attempts to examine the complex relationships between the energy storage system, the vehicle, and the environment and consequently leads to the determination of desirable specifications and target properties of the ...

This is the second deep dive in our four-part series that explores why battery-based energy storage is key to addressing Southern Europe's grid flexibility challenges. This article delves into the intricacies of the Italian energy market and how the current high reliance on gas-fired power generation puts the country's decarbonization targets at risk and impacts ...

The heat storage concepts, devices and systems proposed and developed for EVs are then reviewed, and potential TES materials for different types of TES devices are discussed. ... TES device occupies the vehicle space, reducing the available space of a vehicle. Therefore, the energy storage density of TES devices is a key design factor to be ...

Semantic Scholar extracted view of "Optimal allocation of electric vehicle charging stations in a highway network: Part 1. Methodology and test application" by G. Napoli et al.

In 2023, residential energy storage continued to dominate Italy's energy storage landscape, representing the largest application scenario for newly added installations. ...

Due to the growing number of automated guided vehicles (AGVs) in use in industry, as well as the increasing demand for limited raw materials, such as lithium for electric vehicles (EV), a more sustainable solution for mobile energy storage in AGVs is being sought. This paper presents a dual energy storage system (DESS) concept, based on a combination ...

In this paper, a distributed energy storage design within an electric vehicle for smarter mobility applications is introduced. Idea of body integrated super-capacitor technology, design concept and its implementation is proposed in the paper. Individual super-capacitor cells are connected in series or parallel to form a string

connection of super-capacitors with the ...

In recent years, an increasing number of publications have appeared for the heat supply of battery electric vehicles with thermal energy storage concepts based on phase change materials (PCM) [19 ...

According to data released last week by Italian solar energy association Italia Solare, Italy's independent energy storage installations surged in the first half of 2024, with a ...

The energy storage system is of decisive importance for all types of electric vehicles, in contrast to the case of vehicles powered by a conventional fossil fuel or bio-fuel based internal ...

Integration and validation of a thermal energy storage system for electric vehicle cabin heating. SAE Tech Pap, 2017-March (2017), 10.4271/2017-01-0183. Google Scholar ... Thermal energy storage for electric vehicles at low temperatures: concepts, systems, devices and materials. Renew Sustain Energy Rev, 160 ...

The concept of net or Nearly Zero Energy Buildings (ZEB) has brought to the forefront by the EPBD (Energy Performance of Buildings Directive) [1], considered as a promising approach to minimize the building sector energy consumptions (about 30-40% of the world primary energy consumptions in regions belonging to the Organisation for Economic ...

But since they are intermittent sources, options for energy storage are already becoming increasingly important to manage energy demand and ensure reliability. Instead of investing in expensive, stand-alone energy storage projects, EV batteries can help manage grid load using V2X.

SAET has been a pioneer in the provision of energy storage solutions. Thanks to its strong expertise in grid and electrical systems, it was selected as early as 2012 as a supplier in the first Italian experimentations with storage systems for the electricity grid by ENEL and TERNA.SAET presented itself as EPC Contractor for the supply of turnkey plants, or as a system integrator in ...

The project will test a new long-duration storage concept pioneered by Italian startup Energy Dome that involves using compressed carbon dioxide to drive an otherwise conventional turbine. The ...

An electric vehicle is a vehicle in which the propulsion system converts electrical energy that is stored in a battery into mechanical energy used to move the vehicle; such a vehicle does not have a gasoline engine on board, and thus requires a large (and expensive) battery to guarantee a still very limited range (up to about 100 miles).

After introducing the methodology in the first part of the article, in this Part 2 the algorithm is applied to calculate and identify the optimal positions of the charging stations for electric vehicles in the Italian highway network.

In active distribution networks (ADNs), mobile energy storage vehicles (MESVs) can not only reduce power losses, shave peak loads, and accommodate renewable energy but also connect to any mobile energy storage station bus for operation, making them more flexible than energy ...

Researchers from Australia have created a model to optimize the interaction between vehicle-to-home (V2H) systems and residential PV connected to battery storage. They claim V2H can help reduce ...

Italian designer Pierpaolo Lazzarini has delivered some compellingly strange concepts over the years and his latest flying car design is no exception. The Hover Coupè is a gorgeous looking blend ...

In the last decade, the need for a holistic approach has emerged in literature. For this reason, the concept of Smart Energy Systems has been established in the literature in order to transcend singular sector-focused strategies and emphasise cross-sector interconnections [8] nsequently, the literature regarding the sector coupling technologies and their role in the ...

Journal of Energy Storage. Volume 25, October 2019, 100906. Development and experimental analysis of a hybrid cooling concept for electric vehicle battery packs. Author links open overlay panel Yuyang Wei, Martin Agelin-Chaab. Show more. Add to Mendeley. ... high energy density, long cycle life, low self-discharge rate, and high efficiency [1].

Replacing the original Maserati Quattroporte was to be a challenging prospect, one that resulted in several concept cars and just a handful of road cars before Alejandro de Tomaso ditched the II and moved on to the III. One of the steps on the way was the Medici concept car project, which saw two concepts from Giorgetto Giugiaro.
