

How can A microthermal photovoltaic system reduce CO/NO emissions?

In addition, based on the results of research on combustion-based microthermal photovoltaic systems, improved combustion stabilization techniques in energy technology systems can effectively reduce CO/NO emissions, improve combustion/radiation efficiency and the energy conversion performance of the system, and alleviate energy pressure.

How can a drive power unit improve the performance of a vehicle?

The drive power unit composed of multiple energy sources can adequately utilize the characteristics of various energy sources to enhance the overall performance of the vehicle, and this composition can not only reduce the manufacturing cost of the vehicle to a certain extent but also provide ideas for the optimization of the vehicle energy system.

What is the Italian end-of-Life Vehicles (ELVs) reverse supply chain?

It turns out to be the first assessment about the critical aspects belonging to the Italian End-of-Life Vehicles (ELVs) reverse supply chain involving 18 dismantling plants, a shredder plant and 630 ELV representatives of different categories of vehicles treated in Italy during 2006.

How to reduce the cost of EVs?

Therefore, to reduce the cost of EVs, many efforts have been made by introducing new and simplified technologies for speed controllers, battery charging, motors, power electronics and different types of cells. To cover the longer range, EVs require high energy density batteries.

Can neural networks be used for vehicle energy management?

The analysis in 5.2 Optimization-based EMS, 5.3 Learning-based EMS shows that neural networks are commonly used for vehicle travel speed prediction and operating state classification (power allocation, torque allocation), and are often synergized with other energy strategies when applied to vehicle energy management.

5.3.2.

What are the recycling and recovery targets for the EU?

1 University of Bologna, Department of Industrial Chemistry and Materials, Viale Risorgimento 4, I-40136 Bologna, Italy. Each European Member State must comply with Directive 2000/53/EC recycling and recovery targets by 2015, set to 85% and 95%, respectively.

Capacitors exhibit exceptional power density, a vast operational temperature range, remarkable reliability, lightweight construction, and high efficiency, making them extensively utilized in the realm of energy storage. There exist two primary categories of energy storage capacitors: dielectric capacitors and supercapacitors. Dielectric capacitors encompass ...

The second paper [121], PEG (poly-ethylene glycol) with an average molecular weight of 2000 g/mol has been investigated as a phase change material for thermal energy storage applications. PEG sets were maintained at 80 °C for 861 h in air, nitrogen, and vacuum environment; the samples maintained in vacuum were further treated with air for a period of ...

Metal hydrides are a class of materials that can absorb and release large amounts of hydrogen. They have a wide range of potential applications, including their use as a hydrogen storage medium for fuel cells or as a hydrogen release agent for chemical processing. While being a technology that can supersede existing energy storage systems in manifold ...

This research paper introduces an avant-garde poly-input DC-DC converter (PIDC) meticulously engineered for cutting-edge energy storage and electric vehicle (EV) applications. The pioneering ...

PDF | This paper presents a state-of-the-art review of electric vehicle technology, charging methods, standards, and optimization techniques. The... | Find, read and cite all the research you need ...

Zusammenfassung: This book gathers original peer-reviewed papers reporting on innovative methods and tools in design, modeling, simulation and optimization, and their applications in engineering design, manufacturing, and other relevant industrial sectors. Based on contributions to the Third International Conference on Design Tools and Methods in Industrial Engineering, ...

This trial aims at improving the experimental knowledge related to ELVs added waste, pre-treatment, part reuse, recycling and final metal separation and car fluff disposal. Finally, the study also focuses on the calculation of the effective Italian ELV recycling rate, which results equal to 80.8%, and auto shredder residue (ASR) characterization.

In Italy, in order to reach the 85% recycling and 95% recovery rate in 2015, the implementation of innovative and economically sustainable material and energy recovery ...

This trial aims at improving the experimental knowledge related to ELVs added waste, pre-treatment, part reuse, recycling and final metal separation and car fluff disposal. ...

This article delivers a comprehensive overview of electric vehicle architectures, energy storage systems, and motor traction power. Subsequently, it emphasizes different charge equalization ...

Aluminum Heat Treatment: Methods, Benefits, and Best Practices ... The design of contemporary heat treatment furnaces focuses on energy efficiency, demanding less power and producing fewer emissions. It is a way to reduce the environmental impact and helps with economic concerns. ... With the automobile industry moving towards fuel-efficient ...

Various hydrogen transport and storage methods were analyzed to assess which is the most cost-effective solution. In addition, the influence of wind capacity factor and electricity cost on the levelized cost of hydrogen (LCOH) was analyzed to provide an in-depth comparative assessment of the two production scenarios. ... liquid state storage ...

In this paper, a distributed energy storage design within an electric vehicle for smarter mobility applications is introduced. Idea of body integrated super-capacitor technology, design concept ...

14 This study evaluates the integration of electric vehicles in the Italian 15 energy scenario and their synergy with electricity generation from renewable 16 energy sources, identifying the ...

After the hydrogen produced to power the fuel cell vehicle, for power generation, it can be used for electricity. Approximately 90% of the hydrogen produced today ... Its cost will decrease with the increase in the areas of hydrogen use and the development of production-storage methods. It is an energy that is important from hydrogen production ...

It turns out to be the first assessment about the critical aspects belonging to the Italian End-of-Life Vehicles (ELVs) reverse supply chain involving 18 dismantling plants, a shredder plant and ...

1. Introduction. A problem that the population faces is that when a car is parked for minutes or hours in un-shaded spaces under direct sunlight [1] or even on cloudy days [2], the sunrays provokes a cabin to overheat [3] expressed as a raise of the internal temperature of the air, this parameter is one of the measurable factors of discomfort in passengers, and to avoid it ...

Lithium-ion batteries (LIBs) are commonly used in portable device, electric vehicles and large-scale energy storage systems, due to its high energy density, low cost, and environment-friendliness [1, 2] can be observed in Fig. 1a, b that the scale and yield of lithium-ion batteries have achieved a steady growth trend every year. According to statistics, the ...

The use of regenerative braking, already widespread in tramway field, may represent one of the most promising methods to increase energy efficiency, combined with regenerative braking with storage ...

Several researchers from around the world have made substantial contributions over the last century to developing novel methods of energy storage that are efficient enough to meet increasing energy demand and technological breakthroughs. This review attempts to provide a critical review of the advancements in the energy storage system from 1850 ...

DOI: 10.1016/j.est.2019.101015 Corpus ID: 208122642; Optimal allocation of electric vehicle charging stations in a highway network: Part 2. The Italian case study @article{Napoli2019OptimalAO, title={Optimal

allocation of electric vehicle charging stations in a highway network: Part 2.

The national energy system has been accurately characterized using currently available data and its operation has been simulated with varying degrees of electric vehicle penetration through an ...

potential of battery storage to replace combined-cycle gas turbine (CCGT) plants in re-responding to variable peak demand for current and future energy scenarios in the UK. The most recent critical literature review [20] surveyed the existing LCA studies on grid-scale, stationary Li-ion energy storage systems and highlighted research gaps

In the former case, the hydrogen is stored by altering its physical state, namely increasing the pressure (compressed gaseous hydrogen storage, CGH 2) or decreasing the temperature below its evaporation temperature (liquid hydrogen storage, LH 2) or using both methods (cryo-compressed hydrogen storage, CcH 2). In the case of material-based ...

In 2023, residential energy storage continued to dominate Italy's energy storage landscape, representing the largest application scenario for newly added installations. Residential PV systems retained their prominence, accounting for 82% and 73% of new installations, followed by utility-scale storage and commercial & industrial (C& I) energy ...

Energy and water resources are the fundamental requirements for development. Due to human population growth, globalisation, the unsustainable use of energy and water resources, and an unsustainable world economy over the past 70 years, the world is currently dealing with a series of environmental, financial, and social crises that have reached almost ...

It is known that the energy storage and external circuit are connected by the interface circuit. For the active control topology, the current researches mainly focus on the battery side with the boost converter to realize the classic DC bus voltage regulation research and the supercapacitor side with the bidirectional DC/DC converter is regarded as the auxiliary ...

The effect of co-digesting sludge with bio-waste was investigated using an experimental apparatus set for reproducing the operating conditions of a full-scale digester in an existing wastewater treatment plant of 90,000 PE (population equivalent). An increase in the organic loading rate from 1.46 kgVS/m³ day to 2.1 kgVS/m³ day obtained by introducing 40 ...

The traditional charging pile management system usually only focuses on the basic charging function, which has problems such as single system function, poor user experience, and inconvenient management. In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile ...

Energy is essential in our daily lives to increase human development, which leads to economic growth and productivity. In recent national development plans and policies, numerous nations have prioritized sustainable energy storage. To promote sustainable energy use, energy storage systems are being deployed to store excess energy generated from ...

(1): (1) $E_1 = k E_e L / 100 m M$ where k is the energy coefficient of the battery control system, representing the ratio of battery energy consumption to vehicle mass; E_1 is the energy required to carry the battery; E_e is the energy consumed by the vehicle every 100 km; L is the vehicle's total mileage in the use phase.

This paper presents a cutting-edge Sustainable Power Management System for Light Electric Vehicles (LEVs) using a Hybrid Energy Storage Solution (HESS) integrated with Machine Learning (ML) ...

The main advantages is that the energy storage is unnecessary. This type of energy generally is extracted with the ground heat exchangers usage. ... Due to those reasons naturally arose the need of combining water treatment methods with energy sources in a sustainable way. The water treatment system is determined by water quality and water type ...

The cost of each storage method can vary widely depending on several factors, including the specific storage system design, the volume of hydrogen being stored, and the local energy market Table 4 show a comparison of hydrogen storage methods. Additionally, the cost of hydrogen storage is expected to decrease over time as technology advances ...

Materials chemical characterization (NMC and LFP cathodes characterization methods) Source: C. Pillot. The rechargeable battery market and main trends 2020 -2020. Avicenne Energy, 2021. IEMAP Project . Italian Energy Materials Acceleration Platform WP2: Sustainable materials for electrochemical energy storage. Source: McKinsey & Company, 2022.

This trial aims at improving the experimental knowledge related to ELVs added waste, pre-treatment, part reuse, recycling and final metal separation and car fluff disposal. Finally, the study also focuses on the calculation of the effective Italian ELV recycling rate, which results equal ...

Optimal decarbonisation pathways for the Italian energy system: Modelling a long-term energy transition to achieve zero emission by 2050 ... and bidirectional energy flow (vehicle-to-grid systems) [19]. Additionally, ... hydrogen generation through fuel cells is the preferred method for storage and balancing, resulting in a decrease in EB ...

Thermal Energy Storage (TES) systems are pivotal in advancing net-zero energy transitions, particularly in the energy sector, which is a major contributor to climate change due to carbon emissions. In electrical vehicles (EVs), TES systems enhance battery performance and regulate cabin temperatures, thus improving energy efficiency and extending vehicle ...

Italian energy storage vehicle treatment method
