What drives growth in Italy's energy storage sector?

LONDON (ICIS)-Market actors predict growth in the Italian energy storage sector will be driven by the system balancing needs of the grid operator in the face of increasing renewable penetration and conventional plant closures. However, permitting bottlenecks remain a key concern.

Why did Italy announce a EUR8bn energy package?

In February, the Italian prime minister announced an EUR8bn energy package to shield individual, industrial, and public sector energy consumers from rising electricity and gas bills that threaten to undermine post-pandemic economic recovery.

What are Italy's energy goals?

Italy's ambitious energy goals,outlined in the National Integrated Energy and Climate Plan (PNIEC),mark a transformative shift toward renewable energy. By 2030,the country is targeting 28GW of wind power and nearly 80GW of solar capacity,making energy storage essential for ensuring grid stability and maximizing renewable integration.

Why does Italy need more energy?

With nearly three-quarters of all energy needs in Italy being met by imports,the country faces significant pressure from rising gas pricesin European and global markets. Italian industries are expected to see more than a 360% increase in energy costs from EUR8bn in 2019 to EUR37bn in 2022.

Figures by industry group Italia Solare put the current size of the Italian energy storage sector at approximately 450MW of total installed capacity. Italian transmission system operator (TSO) Terna said that 1GW of storage linked to solar farms will be needed by 2025 to help maintain system adequacy, with additional 6GW of utility-scale ...

The grid-scale Italian energy storage market has been kickstarted from two different directions. The first was big wins for battery storage projects in ancillary service and capacity market auctions by Terna, in 2020 and 2022, respectively. The second is a policy recognition from Terna that energy storage will be

Solar power microturbines are required to produce steady power despite the fluctuating solar radiation, with concerns on the dispatchability of such plants where thermal energy storage may offer a solution to address the

To investigate how the energy storage properties of Co_3O_4 -based honeycombs are affected by pine needle content, Co-Al-P1, Co-Al-P2.5, and Co-Al-P7.5 were synthesized. Fig. 10 shows the effect of pine needle content on the energy storage properties during 15 redox cycles. Increasing the pine needle content from 1 % to 2.5 % led to a higher ...

Concentrated solar power (CSP) has been regarded as one of the most promising strategies for the usage of solar energy on a large scale. However, the low energy density, instability, and intermittence of solar energy limit the layout and operation of CSP plants [1], [2]. Therefore, energy storage systems are often used in CSP plants to compensate for the ...

[Honeycomb Energy, a new force of power batteries, has launched a round of financing expected to raise 30-4 billion yuan.] according to a number of media reports on March 22, Honeycomb Energy, which just completed 3.5 billion yuan in round A financing in February this year, is carrying out round B financing. The amount of this round of financing is expected ...

Bowen Chen's group systematically reported a series of honeycomb-like carbon nanofibers applied in Li-ion storage [131], lithium polysulfides adsorption [128, 129], capacitive energy storage [51, 126] by electrostatic spinning with the assistance of blown air traction, in which polyvinyl alcohol (PVA)/polyvinylpyrrolidone (PVP) and ...
