

What's going on with battery energy storage in Italy?

Since it went to press, regulators in Italy approved new auction rules for grid-scale storage and gave the green light to a 200MW/800MWh battery energy storage system (BESS) project from UK developer Aura Power, while Eni Plenitude brought a 15MW BESS online.

How many MW of battery storage projects are being developed in Italy?

Fund managers investing in clean energy Nuveen Infrastructure (formerly Glennmont Partners) and independent renewables asset management and development firm Exus Renewables have agreed to co-develop around 800 MW of battery storage projects in southern Italy, with each company co-developing a portfolio of around 400 MW of projects.

Why is battery technology important in Italy?

"As Italy continues its renewable energy transition, battery technology stands to play a hugely important role in supporting established clean energy generators, through its ability to manage intermittency issues and associated price fluctuations.

Will Italy deploy 900MW in 2023/2024?

Research firm LCP Delta recently forecast that after annual grid-scale deployments of just 20MW in the last few years, Italy would deploy 800-900MW in 2023/2024, second in scale only to the UK. In this piece, we interview executives from three developers looking to gain a foothold in the market: Aquila Clean Energy, Field and Innovo Group.

Which BESS companies are coming to Italy?

Girolami also highlights the China-based BESS providers Sungrow, Huawei and CATL. Last year, competitor Nidec ASI announced orders from Italy of 1.35GW/5.4GWh by an unnamed company. Interestingly, the details and timeline closely match up with the projects being deployed by Enel.

Compared with traditional energy storage technologies, mobile energy storage technologies have the merits of low cost and high energy conversion efficiency, can be flexibly located, and cover a large range from miniature to large systems and from high energy density to high power density, although most of them still face challenges or technical ...

Even though each thermal energy source has its specific context, TES is a critical function that enables energy conservation across all main thermal energy sources [5] Europe, it has been predicted that over 1.4 TWh/year can be stored, and 4 TWh/year of CO₂ releases are prevented in buildings and manufacturing areas by extensive usage of heat and ...
