How do battery energy storage systems work? Simply put, utility-scale battery storage systems work by storing energy in rechargeable batteries and releasing it into the grid at a later time to deliver electricity or other grid services. Without energy storage, electricity must be produced and consumed at exactly the same time.

Energy storage in PV can provide different functions [6] and timescale operations [7]. It can support the grid against disturbances and faults by correcting the over- and under-frequency [8, 9]. Whereas, the BESS can balance the power fluctuations of the RES, thereby providing power ramp rate control [10].
