What is a lead battery energy storage system?

A lead battery energy storage system was developed by Xtreme Power Inc. An energy storage system of ultrabatteries is installed at Lyon Station Pennsylvania for frequency-regulation applications (Fig. 14 d). This system has a total power capability of 36 MW with a 3 MW power that can be exchanged during input or output.

Does stationary energy storage make a difference in lead-acid batteries?

Currently, stationary energy-storage only accounts for a tiny fraction of the total sales of lead-acid batteries. Indeed the total installed capacity for stationary applications of lead-acid in 2010 (35 MW) was dwarfed by the installed capacity of sodium-sulfur batteries (315 MW), see Figure 13.13.

What is a lead-acid battery?

The lead-acid battery is a type of rechargeable battery first invented in 1859 by French physicist Gaston Planté. It is the first type of rechargeable battery ever created. Compared to modern rechargeable batteries, lead-acid batteries have relatively low energy density. Despite this, they are able to supply high surge currents.
