How does light affect plants?

Plants in natural environments are exposed to rapidly changing environmental conditions, especially light, which can change by orders of magnitude in less than a second. It has become clear that rapid and unpredictable fluctuations in light intensity can be more damaging than more gradual changes [22,24-32].

What factors affect the fraction of light energy dissipated by NPQ?

It is also important to consider that the fraction of light energy dissipated by the NPQ, i.e. FNPQ, will also depend on the fraction of PSII in open states, which will also be impacted by ambient and fluctuating light, leaf and other factors.
