

How long does a lithium ion battery last?

For example, a lithium-ion cell charged to 4.20V/cell typically delivers 300-500 cycles. If charged to only 4.10V/cell, the life can be prolonged to 600-1,000 cycles; 4.0V/cell should deliver 1,200-2,000 and 3.90V/cell should provide 2,400-4,000 cycles. On the negative side, a lower peak charge voltage reduces the capacity the battery stores.
