Are lithium ion batteries good for stationary energy storage?

As of 2023 [update], LiFePO₄ is the primary candidate for large-scale use of lithium-ion batteries for stationary energy storage (rather than electric vehicles) due to its low cost, excellent safety, and high cycle durability. For example, Sony Fortelion batteries have retained 74% of their capacity after 8000 cycles with 100% discharge. [99]

Why do lithium ion batteries need to be charged?

Simply storing lithium-ion batteries in the charged state also reduces their capacity (the amount of cyclable Li⁺) and increases the cell resistance (primarily due to the continuous growth of the solid electrolyte interface on the anode).

What are lithium-ion batteries used for?

Not only are lithium-ion batteries widely used for consumer electronics and electric vehicles, but they also account for over 80% of the more than 190 gigawatt-hours (GWh) of battery energy storage deployed globally through 2023.

What is a lithium ion battery?
