A Wind Energy Converter (or Wind Turbine) is a device that converts wind energy, first with a rotor blade into mechanical energy, and then with an induction generator into electrical energy. The function of a Wind Energy Converter and its structural design is illustrated in Fig. 4.30, on the right, the process elements are named.

Mechatronic units with identification from "L31B1138" onwards: Dimension -a- = 32 mm; Using my production date identification number, L30M1078, as an example.
