

Considering that doped divalent  $Mg^{2+}$  can incorporate into  $Zr^{4+}$  sites to increase  $Na^{+}$  concentration in NZSP and promote  $Na^{+}$  migration with a much lower energy ...

In this review, we comprehensively present recent advances in designing high-performance Zn-based batteries and in elucidating energy storage mechanisms. First, various ...

Capitalizing on attributes such as high safety, ample reserves, low price, and substantial energy density, the rechargeable Zn-ion battery has garnered considerable ...

Mingyue He 1, Zahra Soltani 1, Mojdeh Khorsand 1,\* , Aaron Dock 2, ... energy storage systems (ESSs) are controlled by a risk-based chance-constrained method. ... optimize agent revenue while addressing the uncertainty of DERs by a chance-constrained approach. More studies on the optimal operation of distribution grids with uncertainty

Mingyue Du: Data curation, Writing - original draft. Chenlong Guo: ... Predictably, this innovative type of PCCs had opened up creative routes for energy storage and conversion materials, which would have a potential value in various fields such as electronic protection, military stealth, energy-saving buildings, and solar thermal energy ...

Energy from renewable energy sources such as solar, wind and tidal, is becoming increasingly prevalent and crucial to mitigate the energy crisis and protect the environment [1], [2], [3], [4]. However, their intermittent nature can lead to fluctuations in energy supply, making it necessary to adopt large-scale energy storage systems. lithium-ion batteries (LIBs), currently ...

K-ion battery (KIB), as an alternative to traditional Li-ion battery (LIB), has drawn ever-growing research interests because of its low cost, high voltage and similar working principle to that of LIB. Emerging understanding of energy storage mechanisms of KIBs reveals, however, significant differences between KIBs and other alkaline-ion batteries, which accounts for poor ...

Ph.D, Department of Energy, Technical University of Denmark (1993); Professor of Tsinghua University, China (1998- ); Academician of the Chinese Academy of Sciences (2017-); Chief Scientist of ...

1 Introduction. Sodium-ion batteries (NIBs) have gained significant attention as a highly promising source of large-scale energy storage due to its cost-effectiveness, eco-friendliness, and the abundance of raw materials in the earth's crust. [] However, the graphite anode in commercially available lithium-ion batteries (LIBs) has demonstrated inadequate ...

Lithium-sulfur (Li-S) batteries are considered as promising candidates for future-generation energy storage systems due to their prominent theoretical energy density.

Phase change energy storage technology, which can solve the contradiction between the supply and demand of thermal energy and alleviate the energy crisis, has aroused a lot of interests in recent ...

Batteries play a pivotal role in various electrochemical energy storage systems, functioning as essential components to enhance energy utilization efficiency and expedite the realization of energy and environmental sustainability. Zn-based batteries have attracted increasing attention as a promising alternat

However, due to the dissolution of Mn and the damage caused by the embedded/de-embedding of the energy storage ions during charge/discharge, the exhibited poor stability limits its application. Here, the a-MnO<sub>2</sub> lattice is stabilized by the introduction of alkali metal ions (Li<sup>+</sup>, Na<sup>+</sup>, and K<sup>+</sup>) to create a &quot;pillar effect&quot;.

The development of two-dimensional (2D) high-performance electrode materials is the key to new advances in the fields of energy storage and conversion. As a novel family of 2D layered materials, MXenes possess distinct structural, electronic and chemical properties that enable vast application potential in many fields, including batteries, ...

Redox-targeting reactions incorporate solid material with the redox flow battery (RFB) system to increase energy density and open new areas for RFBs. However, the first generation of redox ...

The development of two-dimensional (2D) high-performance electrode materials is the key to new advances in the fields of energy storage and conversion. As a novel family of 2D layered materials, MXenes possess distinct structural, electronic and chemical properties that enable vast application potential in many fields, including batteries, supercapacitor and catalysis.

energy storage, redox flow battery, redox targeting reaction, operando measurement, electrochemistry, spectroelectrochemical method: Issue Date: 23-Aug-2019: Citation: ZHOU MINGYUE (2019-08-23). REDOX FLOW BATTERY FOR LARGE-SCALE ENERGY STORAGE. ScholarBank@NUS Repository. Abstract:

During energy storage, MWCNT serves as miniature current collector to shorten pathway of electron collection and transmission. In addition, S<sup>2-</sup> etching agent with Kirkendall effect makes edges and surfaces of the resulted sulfide structures rougher provide more active sites and improves electrochemical performance compared with precursors.

6 Bowei Du<sup>1,2,3,4</sup>, Mingyue Wang<sup>1,2,3,4</sup>, Qing Zhao<sup>4</sup>, Xiaofei Hu<sup>1,2,3,4\*</sup>, Shujiang Ding<sup>1,2,3\*</sup> 8 ... 68 phase change energy storage technology is an important technology to improve energy 69 utilization efficiency and protect the environment, its large-scale industrial application is

Shared energy storage has the potential to decrease the expenditure and operational costs of conventional energy storage devices. However, studies on shared energy storage configurations have primarily focused on the peer-to-peer competitive game relation among agents, neglecting the impact of network topology, power loss, and other practical ...

Polyethylene glycol (PEG) is an important and popular phase change material (PCM), but is not a good antistatic material, which would cause the accumulation of static electricity and electrostatic discharge when used for the thermal energy storage and thermal management of electrical devices.

Batteries play a pivotal role in various electrochemical energy storage systems, functioning as essential components to enhance energy utilization efficiency and expedite the realization of energy and environmental sustainability. Zn-based batteries have attracted increasing attention as a promising alternative to lithium-ion batteries owing to their cost ...

Emerging understanding of energy storage mechanisms of KIBs reveals, however, significant differences between KIBs and other alkaline-ion batteries, which accounts for poor electrochemical performance when the electrodes are directly adopted from other alkaline ion batteries for KIBs. ... author = &quot;Mingyue Wang and Hongming Zhang and Jiang Cui ...

Batteries play a pivotal role in various electrochemical energy storage systems, functioning as essential components to enhance energy utilization efficiency and expedite the realization of energy and environmental sustainability. ... Jiarui Kang 1, Han Chen 1, Mingyue Zhang 1, Yan Liu 2, Dong Ha Kim 3, Yijiang Liu 4, Zhiqun Lin 1 3 ...

Batteries play a pivotal role in various electrochemical energy storage systems, functioning as essential components to enhance energy utilization efficiency and expedite the realization of energy and environmental sustainability. Zn-based batteries have attracted increasing attention as a promising alternative to lithium-ion batteries owing to their cost effectiveness, enhanced ...

DOI: 10.1016/j.apenergy.2024.123414 Corpus ID: 269830831; Scalable energy management approach of residential hybrid energy system using multi-agent deep reinforcement learning

NH<sub>4</sub><sup>+</sup> ions as charge carriers show potential for aqueous rechargeable batteries. Studied here for the first time is the NH<sub>4</sub><sup>+</sup>-storage chemistry using electrodeposited manganese oxide (MnO<sub>x</sub>). MnO<sub>x</sub> experiences morphology and phase transformations during charge/discharge in dilute ammonium acetate (NH<sub>4</sub> Ac) electrolyte. The NH<sub>4</sub> Ac ...

Advanced Energy Materials is your prime applied energy journal for research providing solutions to today's global ... Na<sub>3</sub>V<sub>2</sub>(PO<sub>4</sub>)<sub>3</sub> as the Sole Solid Energy Storage Material for Redox Flow Sodium-Ion ... Mingyue Zhou. Department of Materials Science and Engineering, National University of Singapore,

## Mingyue energy storage agent

Singapore, 117576 Singapore. Search for ...

Articles 1-20. ?National University of Singapore; Tsinghua University; China University of Petroleum, Beijing? - ??Cited by 1,988?? - ?Electrochemistry? - ?Energy storage? - ?Electrolyte? -...

Ming-Yue Zhang"s 9 research works with 318 citations and 355 reads, including: Solid-Liquid Interfacial Coordination Chemistry Enables High-Capacity Ammonium Storage in Amorphous Manganese ...

Energy storage technology can relieve the temporal and spatial contradictions among energy generation, supply and demand, thus contributing to the carbon footprint management. So, it is imperative to develop new energy-saving materials, which store energy yielded in production activities or in the environment and release in appropriate places ...
