We provide misting to all of the high-touch points and open surfaces after a thorough pre-wipe to eliminate visible spills or soils on hard surfaces.

Why do metalworking companies use mist collectors?

Metalworking companies use mist collectors on their machine tools to help provide clean airto reduce the adverse effects of exposure to metalworking fluids,comply with indoor air quality standards,reduce maintenance costs,reduce housekeeping costs,and improve part quality.

What is a dirty mist?

However,a dirty mist will also contain a fraction of dry particles (swarf) that must also be separated from the airstream. Mist droplets can be captured in several ways. Electrostatic precipitators work by drawing the mist-laden air through an ionizer that gives each droplet either a positive or a negative charge.

How do I choose the best disinfectant?

When disinfecting, choose the safest method that is also effective. For most situations, using traditional disinfectant methods, such as liquids, wipes, or disinfectant spray bottles, is sufficient to reduce virus exposure.
