Does Italy have a battery storage market?

This report is part of a series that analyses the battery storage market in select European countries. Italy has both a rapidly growing utility-scale market as well as a flourishing customer-sited battery storage market. Customer-sited storage adoption has been mainly driven by a combination of high electricity prices and generous tax incentives.

Can energy storage systems be integrated with power production plants?

The integration of energy storage systems with power production plants, especially renewable plants, has been growing rapidly in recent years. This is because the installation of storage systems maximises the efficiency of renewable plants by regulating electricity flow and reducing energy waste and costs.

Should storage systems be integrated with renewable plants?

The integration of storage systems with renewable plants would make energy production from renewable sources more efficient and, at the same time, the transmission and distribution system more stable and secure.
