

What is the optimal power system expansion plan for Mozambique?

The optimal power system expansion plan if wind and solar capacity are allowed to triple to reach almost 3 GW by 2032. Currently, the power system of Mozambique is separated into two transmission networks isolated from one another: the Central-Northern and Southern systems. Over 50% of the annual power demand is seen in the Southern system.

How will Mozambique benefit from a more distributed power system?

With this strategy, Mozambique will also avoid locking the systems in for decades to come with large baseload plants, and benefit from a more distributed power system.

Can Mozambique develop a power system from 2022 to 2032?

The study covers two possible scenarios, low renewable and high renewable scenarios, that would enable the country to meet the growing electricity demand and compares them to identify the best pathway to develop Mozambique's power system from 2022 to 2032.

Why is technology modularity important in Mozambique?

Technology modularity also plays a key role. Mozambique requires between 100 MW and 500 MW of new generation annually to be built across the country to be able to meet the increasing demand. On a regional level, this represents 60 to 80 MW of new power generation.
