

Multifunctional devices integrated with electrochromism and energy storage or energy production functions are attractive because these devices can be used as an effective approach to address the ...

Energy storage devices are arousing increasing interest due to their key role in next-generation electronics. Integration is widely explored as a general and effective strategy aiming at high performances. Recent progress in integrating a variety of functions into electrochemical energy storage devices is carefully described. Through integration at the level ...

With the advent of multifunctional devices with electrochromic (EC) behavior and electrochemical energy storage, complementary design of film structures using inorganic-organic materials has ...

With the rapid prosperity of the Internet of things, intelligent human-machine interaction and health monitoring are becoming the focus of attention. Wireless sensing systems, especially self-powered sensing systems that can work continuously and sustainably for a long time without an external power supply have been successfully explored and developed. Yet, ...

The energy devices for generation, conversion, and storage of electricity are widely used across diverse aspects of human life and various industry. Three-dimensional (3D) printing has emerged as ...

Multifunctional energy storage and conversion devices that incorporate novel features and functions in intelligent and interactive modes, represent a radical advance in consumer products, such as wearable electronics, healthcare devices, artificial intelligence, electric vehicles, smart household, and space satellites, etc.

The multifunctional performance of novel structure design for structural energy storage; (A, B) the mechanical and electrochemical performance of the fabric-reinforced batteries 84; (C, D) the schematic of the interlayer locking of the layered-up batteries and the corresponding mechano-electrochemical behaviors 76; (E, F) the tree-root like ...

Herein, a thin film of Mo-WO₃ was prepared using the ECD method. Both the electrochromic and energy storage performances were studied for its multifunctional purpose. Furthermore, an integrated electrochromic device (PV-EC) was developed by integrating quantum dot-sensitized solar cells (QDSSCs) into the device as an alternative power source, allowing ...

Multifunctional energy devices with various energy forms in different operation modes are under current research focus toward the new-generation smart and self-powered electronics.

Multifunctionalization of fiber-reinforced composites, especially by adding energy storage capabilities, is a promising approach to realize lightweight structural energy storages for future transport vehicles. Compared to conventional energy storage systems, energy density can be increased by reducing parasitic masses of non-energy-storing components and by benefitting ...

A high-performance electrochromic-energy storage device (EESD) is developed, which successfully realizes the multifunctional combination of electrochromism and energy ...

Moreover, the energy storage components are not limited to SC and LIB, and other exciting types of energy storage devices, such as sodium-ion batteries, zinc-air batteries, etc., are heavily researched in the integrated solar cell systems [27].

A high-performance electrochromic-energy storage device (EESD) is developed, which successfully realizes the multifunctional combination of electrochromism and energy storage by constructing ...

multifunctional devices. Integration with energy harvesting devices is then provided for self-powering devices. The integration of LIBs and SCs into smart fabrics is followed to reflect a new booming direction in the energy storage industry. The current challenges and developing directions are finally summarized for future study. 2.

With the increasing demand for wearable electronics (such as smartwatch equipment, wearable health monitoring systems, and human-robot interface units), flexible energy storage systems with eco-friendly, low-cost, multifunctional characteristics, and high electrochemical performances are imperative to be constructed.

A Light-Weight, Thin-Thickness, Flexible Multifunctional Electrochromic Device Integrated with Variable Optical, Thermal Management and Energy Storage September 2022 *Electrochimica Acta* 435:141274

Multifunctional electrochromic devices with diversified functions are highly desirable for intelligent electronic systems compared to conventional electrochromic devices with sole applicability. Herein, a multifunctional electrochromic device integrated with variable optical, thermal management and energy storage is realized by preparing nanowire-structured coral-like PANI ...

The electrochromic device was light-weight, thin-thickness and flexible. ... thermal management and energy storage. The multifunctional electrochromic devices showed reversible color changes between brownish-yellow, green and dark-green which is crucial for visible adaptive camouflage in natural conditions such as sand and forest. The maximum ...

It is very similar to the energy conversion process of energy storage devices, so more and more people are

applying electrochromic materials in the field of multifunctional energy storage, which can not only achieve ...

Here we report the realisation of a fully operational 46-inch smart textile lighting/display system consisting of RGB fibrous LEDs coupled with multifunctional fibre devices that are capable of wireless power transmission, touch sensing, photodetection, environmental/biosignal monitoring, and energy storage.

With the advent of multifunctional devices with electrochromic (EC) behavior and electrochemical energy storage, complementary design of film structures using inorganic-organic materials has shown great potential for developing EC energy storage devices. Herein, hybrid films consisting of $\text{WO}_3 \cdot \text{H}_2\text{O}$ nanoparticle (WHNP)-embedded chitosan thin films on ...

A high-performance electrochromic-energy storage device (EESD) is developed, which successfully realizes the multifunctional combination of electrochromism and energy storage by constructing tungsten trioxide monohydrate ($\text{WO}_3 \cdot \text{H}_2\text{O}$) nanosheets and Prussian white (PW) film as asymmetric electrodes. The EESD presents excellent electrochromic ...

The assembled asymmetric electrochromic energy storage devices based on pPh-4TPA polymer films exhibited maximum energy density of $105.12 \text{ Wh} \cdot \text{kg}^{-1}$ ($107 \text{ mWh} \cdot \text{cm}^{-3}$) and power density of $45 \text{ kW} \cdot \text{kg}^{-1}$ ($45.9 \text{ W} \cdot \text{cm}^{-3}$), which are both the highest energy and power densities among the pure organic electrochromic pseudocapacitors ever reported ...

DOI: 10.2139/ssrn.4150368 Corpus ID: 250237745; A Light-Weight, Thin-Thickness, Flexible Multifunctional Electrochromic Device Integrated with Variable Optical, Thermal Management and Energy Storage

Multifunctional energy storage and conversion devices that incorporate novel features and functions in intelligent and interactive modes, represent a radical advance in consumer products, such as wearable electronics, healthcare devices, artificial intelligence, electric vehicles, smart household, a ...

The articles can be sorted into three themes: 1) advanced energy storage devices, including batteries and supercapacitors; 2) energy harvesting devices, including photovoltaic cells, thermoelectric devices, and triboelectric nanogenerators; 3) multifunctional devices that integrate energy harvesting and storage for optoelectronic and biological ...

It is noteworthy that as multifunctional materials advance, smart window materials now incorporate features for both energy storage and energy conservation. One such device constructed from this material is the electrochromic energy storage window, which is currently under active investigation [86], [87], [88].

More importantly, a multifunctional EM energy conversion and storage device is constructed, which can effectively convert and store harmful EM radiation into useful electrical energy. This research provides

innovative solutions for future energy management and environmental protection, opening a new chapter in the field of green technology.

Herein, a multifunctional electrochromic device integrated with variable optical, thermal management and energy storage is realized by preparing nanowire-structured coral ...

Electrochromic (EC) technology has been regarded as a promising energy-saving technology in various applications, including smart windows, displays, thermal management, rear views, etc. Benefiting from the progress in electrochromic material synthesis, electrochromic electrode fabrication, and electrochromic device configuration design, the focus ...

Energy storage devices are arousing increasing interest due to their key role in next-generation electronics. Integration is widely explored as a general and effective strategy aiming at high ...
