

Preliminary research cited in the report also shows that a substantial amount of the new capacity could come at existing and recently retired nuclear power plant sites. DOE found that 41 sites have room to host one or more large light-water reactors, such as the AP1000 reactors recently built at Plant Vogtle in Georgia, which would create an additional 60 GW of ...

The Department of Energy Office of Nuclear Energy supports research into integrated energy systems (IESs). Clean Energy Source. Nuclear is the largest source of clean power in the United States. It generates nearly 775 billion kilowatthours of electricity each year and produces nearly half of the nation's emissions-free electricity. This avoids more than 471 million metric tons of carbon each year, which is the equivalent of removing 100 million cars off of the road.
