

## Orison energy storage

What is Orison energy storage?

Orison energy storage is a system that is 100-240 VAC @50-60 Hz compatible and designed to work around the globe. It lets you store the solar energy you produce and use it whenever you need it. Orison energy storage is suitable for any energy consumer, whether you own or rent a home, townhome, condo, or apartment and can be an active member of the energy revolution.

How do Orison storage units work?

The storage units are paired with a single self-installable "stick-on" energy monitor placed at the main switchboard /circuit breaker panel. The system is scalable with the Orison Panel+expansion units. No permits, wiring or construction. Orison is designed to be effortless to install and operate.

How does the Orison energy monitor function?

The Orison Energy Monitor monitors the whole home's energy usage on a circuit by circuit basis without entering the breaker/fuse box. It is the first self-installable residential monitor that can measure the currents on all individual breakers and ensures Orison energy storage does not export electricity beyond the utility meter.

Can I add Orison storage to my solar system?

Solar customers can add Orison storage at any time, even alongside existing storage products to increase overall system capacity. Its expandable, self-install design allows it to be the lowest entry point cost in the market for all consumers to participate. The product is:

Who can use Orison solar energy?

Orison solar energy can be used by any energy consumer, whether you own or rent a home, townhome, condo, or apartment. With Orison, you can store the solar energy you produce and use it whenever you need it. Whether you operate a shop, restaurant, hotel, or office, electricity doesn't have to be one of your concerns.
