

What is photothermal phase change energy storage?

To meet the demands of the global energy transition, photothermal phase change energy storage materials have emerged as an innovative solution. These materials, utilizing various photothermal conversion carriers, can passively store energy and respond to changes in light exposure, thereby enhancing the efficiency of energy systems.

Can photochemical energy and photothermal energy be stored together?

For the solar-chemical-thermal fuel application, the solar spectra should be rationally split for simultaneous storage of the photochemical energy and photothermal energy. The emerging photoswitchable PCMs could attract interdisciplinary efforts from chemistry, material science, and energy engineering.

What is photo-thermal conversion phase-change composite energy storage?

Based on PCMs, photo-thermal conversion phase-change composite energy storage technology has advanced quickly in recent years and has been applied to solar collector systems, personal thermal management, battery thermal management, energy-efficient buildings and more.

Are composite inorganic materials suitable for photo-thermal conversion and energy storage?

Composite inorganic materials for photo-thermal conversion and energy storage have potential applications in solar thermal conversion and storage, thermal management of electronic devices, and temperature regulation. However, they also face challenges such as low thermal conductivity, easy leakage, phase separation, and large subcooling.

What is thermal energy storage based on phase change materials?

Thermal energy storage based on phase change materials (PCMs) is of particular interest in many applications, such as the heating and cooling of buildings, battery and electronic thermal management, and thermal textiles.

What are photo-thermal conversion materials & PCMs?

They consist of photo-thermal conversion material and PCMs, which can store or release a large amount of thermal energy during the solid-liquid phase-change process. These materials have great potential for applications in desalination, heating, construction, and solar energy storage systems.

Photothermal Chemistry Based on Solar Energy: From Synergistic Effects to Practical Applications. Jianan Hong, ... charge will undergo redistribution to form a new equalized Fermi level, which will cause the CB to bend at the interface area and form a Schottky barrier, resisting electron transfer from the nanometals to the semiconductor ...

The photothermal power plant in Dunhuang City of northwest China's Gansu Province covers over 1.4 million

square meters, with 1 ... Energy Storage Energy Efficiency New Energy Vehicles Energy Economy Climate Change Biomass Energy. Video Policy & Regulation Exhibition & Forum Organization Belt and Road. Solar. Tuesday 15 Aug 2023. China's ...

These materials, utilizing various photothermal conversion carriers, can passively store energy and respond to changes in light exposure, thereby enhancing the efficiency of energy systems. Photothermal phase change energy storage materials show immense potential in the fields of solar energy and thermal management, particularly in addressing ...

Here, novel photothermal conversion and energy storage composite was designed and fabricated to solve the problem. Firstly, nanoscale poly (p-phenylenediamine) (PPPD) as stabilizer and photothermal conversion material was synthesized and used in the encapsulation of lauryl myristate as phase change material (PCM) with phase change ...

Meanwhile, PDA also improved the overall thermal conductivity of the material. Our work provided a new method to utilize the photothermal properties of polydopamine. Meanwhile, it can reduce the cost of photothermal energy storage PCMs and further improve the potential of PCM energy storage.

Photothermal phase change energy storage materials show immense potential in the fields of solar energy and thermal management, particularly in addressing the intermittency issues of solar ... emerging fields such as new energy vehicles, personal thermal management, aerospace, and electronic information. As illustrated in Fig. 1, when PCMs are ...

Photothermal materials can convert the absorbed light energy into heat energy, and combined with phase change energy storage materials can realize the utilization of solar energy. The encapsulated PCM is a good combination platform with PCM as core material and shell composed of photothermal materials.

The rapid growth in energy demand, declining fossil fuel reserves and the projected energy crisis have forced the scientific community to reassess its research priorities and shift toward alternative, viable and environmentally friendly energy sources [1]. Different types of energy technologies, including thermoelectric power generation, solar photovoltaic, solar ...

Solar energy is a high-priority clean energy alternative to fossil fuels in the current energy landscape, and the acquisition, storage, and utilization of solar energy have long been the subject of research [[1], [2], [3], [4]]. The development of new materials has facilitated the technique for utilizing solar energy [5], such as phase change materials (PCMs), which have ...

It is highly desirable to seek green and sustainable technologies, such as employing photothermal effects to drive energy catalysis processes to address the high energy demand and associated environmental impacts induced by the current methods. The photothermocatalysis process is an emerging research area with great potential in efficiently ...

Thermal energy storage (TES) is essential for solar thermal energy systems [7]. Photothermal materials can effectively absorb solar energy and convert it into heat energy [8], which has become a research hotspot. Phase change materials (PCM) with high energy density and heat absorption and release efficiency [9], have been widely used in many fields as ...

Photothermal phase change energy storage materials show immense potential in the fields of solar energy and thermal management, particularly in addressing the intermittency issues of solar power. Their multifunctionality and efficiency offer broad application prospects in new energy technologies, construction, aviation, personal thermal ...

Emerging phase change material (PCM)-based photothermal conversion and storage technology is an effective and promising solution due to large thermal energy storage ...

Photothermal energy storage materials [29] PDI/rGO film: Visible, 0.0488 W cm⁻²: 38.7 °C; Photothermal catalysis: CIP degradation [90] 3D graphene nanofluids: Xe lamp, 0.11 W cm⁻²: 43.3 °C: ... delineating design principles and establishing quantitative criteria tailored to new material advancements. Notably, existing reviews often concentrate ...

To meet the demands of the global energy transition, photothermal phase change energy storage materials have emerged as an innovative solution. These materials, utilizing ...

Importantly, the prepared composite PCMs, with a controllable melting temperature of 573.2-654.2 °C, thermal energy storage density of 30.9-37.3 J/g, great repeatable utilization performance ...

Solar energy is a clean and inexhaustible source of energy, among other advantages. Conversion and storage of the daily solar energy received by the earth can effectively address the energy crisis, environmental pollution and other challenges [4], [5], [6], [7]. The conversion and use of energy are subject to spatial and temporal mismatches [8], [9], ...

The photothermal conversion efficiency (η) is calculated as the ratio of the latent heat-storage energy to the solar irradiation energy throughout the phase-change process as follows [10]: $\eta (\%) = \frac{m D H_m A P D t}{E_{in}} \times 100$ where m is the mass of the samples, $D H_m$ is the melting enthalpy of the samples, $D t$ is the time for the sample to ...

The photothermal energy conversion and thermal energy storage efficiency (η) of the composite materials can be estimated from the proportion of heat stored in the FSPCMs, in regard to the optical radiation energy received during phase transition [52]. The calculation can be carried out by the following equation.

To obtain a novel phase-change material with high enthalpy and long endurance for photo-thermal energy storage, multi-walled carbon nanotubes and h-BN were modified to form carboxylated supporting materials

for HA, which have hydroxyl groups. The results of Fourier transform infrared spectroscopy and thermogravimetric analysis suggested the interaction ...

Our work provided a new method to utilize the photothermal properties of polydopamine. Meanwhile, it can reduce the cost of photothermal energy storage PCMs and further improve the potential of PCM energy storage. Introduction. Currently, fossil fuel resources are being gradually depleted, and the world is facing a severe energy crisis. ...

The schematic diagram of the LCES system is shown in Fig. 2 (a), which is made up of compressors, intercoolers, a cooler, reheaters, expanders, a refrigerator, a throttle valve, a cold tank, a hot tank, and two liquid storage tanks (LST) [19], [24] the energy storage process, the low-pressure liquid CO₂ from the LST2 is first cooled and depressurized through ...

The emerging photoswitchable PCMs present a new paradigm for energy storage and utilization. Beyond long-term heat storage and integrated thermal energy storage and upgrade, more potential applications can be further extended. ... the solar spectra should be rationally split for simultaneous storage of the photochemical energy and photothermal ...

Direct-photothermal energy conversion and storage experiment: The 300 W Xe-lamp was used as the solar simulator in the direct-photothermal energy conversion and storage experiment with the intensity adjusted from 0.5 to 2 kW/m². During the experiment, the thermocouple was attached to the surface at different positions of the SA-PCB-20 to ...

To meet the demands of the global energy transition, photothermal phase change energy storage materials have emerged as an innovative solution. These materials, utilizing various ...

In this work, smart thermoregulatory textiles with thermal energy storage, photothermal conversion and thermal responsiveness were woven for energy saving and personal thermal management. Sheath-core PU@OD phase change fibers were prepared by coaxial wet spinning, different extruded rate of core layer OD and sheath layer PU was investigated to ...

Herein, a photothermal energy-storage capsule (PESC) by leveraging both the solar-to-thermal conversion and energy-storage capability is proposed for efficient anti-/deicing.

All forms of energy follow the law of conservation of energy, by which they can be neither created nor destroyed. Light-to-heat conversion as a traditional yet constantly evolving means of converting light into thermal energy has been of enduring appeal to researchers and the public. With the continuous development of advanced nanotechnologies, a variety of ...

Solar energy is a viable and inexhaustible source of energy for both electricity and heat production. In this context energy storage is a major challenge due to strong daily and seasonal ...

1 INTRODUCTION. Renewable, abundant, and clean solar energy is expected to replace fossil fuels and alleviate the energy crisis. However, intermittency and instability are the deficiencies of solar energy due to its weather and space dependence. [] Emerging phase change material (PCM)-based photothermal conversion and storage technology is an effective ...

The photothermal conversion and storage mechanism of the ND/SiO₂ NEPCM is illustrated in Fig. 9, primarily attributed to the thermal vibrations of molecules combined with the optical confinement effect of the ND/SiO₂ hybrid shells, as well as the phase change thermal energy storage capacity provided by n-Octadecane. In brief, solar energy is ...

Latent heat storage systems based on organic phase change materials (PCMs) are considered to be an efficient solar energy utilization strategy, but leakage vulnerability and insensitivity to sunlight of PCMs limit their further application in energy storage. In this work, a new hierarchical porous aerogel was constructed with the carbon ...

Particularly, photothermal energy storage systems that store excess solar energy generated during the day for nighttime utilization are widely adopted. Stearic acid (SA) has garnered significant attention as a recommended PCM due to its favorable properties [5], [6], such as cost-effectiveness, high thermal storage density, non-toxicity, and ...

Photothermal phase change energy storage materials (PTCPCEs), as a special type of PCM, can store energy and respond to changes in illumination, enhancing the efficiency of energy systems and demonstrating marked potential in solar energy and thermal ...

Nevertheless, the composites still show a high thermal energy storage capacity of over 99.5% and the latent heat is above 180 kJ kg⁻¹ compared to pure eicosane (235 kJ kg⁻¹) indicating a high encapsulation efficiency of more than 78%, however, abovementioned method has no advantage to prepare smaller and larger microcapsules because ...

The design of flexible phase change textiles with photothermal conversion/storage performance provides a new direction for their potential applications in advanced solar energy storage. Herein, photothermal phase change microcapsules (microPCMs) were facilely prepared via surface modification of microPCMs with photothermal converter ...
