Start by calculating the energy consumption of each device in watt-hours (Wh). You can do this by multiplying the device's wattage by the number of hours you expect to use it per day. For example, if you plan to use a 30-watt portable fan for 4 hours a day, its energy consumption would be 120 Wh (30 watts x 4 hours).

Portable solar panels can be set up in the sunniest area of your camp to take the best advantage of the available sunlight. Of course, you have to rely on sunny days for electricity, and that's why you need battery storage as part of your solar electricity camping kit. Most solar power camping setups include a portable battery pack.
