

Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA, 2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie, 2019).

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

How can energy storage be profitable?

Where a profitable application of energy storage requires saving of costs or deferral of investments, direct mechanisms, such as subsidies and rebates, will be effective. For applications dependent on price arbitrage, the existence and access to variable market prices are essential.

How is energy storage industry segmented?

The report covers US Energy Storage Companies and it is segmented by Technology (Batteries and Other Energy Storage System Technologies), Phase (Single Phase and Three Phase), and End-User (Residential and Commercial & Industrial).

What are business models for energy storage?

Business Models for Energy Storage Rows display market roles, columns reflect types of revenue streams, and boxes specify the business model around an application. Each of the three parameters is useful to systematically differentiate investment opportunities for energy storage in terms of applicable business models.

Can stationary energy storage improve grid reliability?

Although once considered the missing link for high levels of grid-tied renewable electricity, stationary energy storage is no longer seen as a barrier, but rather a real opportunity to identify the most cost-effective technologies for increasing grid reliability, resilience, and demand management.

A recent research report on battery storage energy systems (BESS) by Rystad Energy claimed that the profit uncertainties in Europe have held back the growth of BESS. According to the latest research, which analyzes day-ahead power prices in Europe for 2023, Bulgaria (BG), Italy (NORD) and Hungary (HU) offer the highest profit potential for BESS energy arbitrage.

The profitability analysis for the two applied storage strategies is listed in . Table 1. Yearly gross profits (revenues from selling electricity minus costs from purchasing electricity at the day-ahead market) are 561 million EUR/a (or 28 EUR/kW. installed) when . minimizing system costs. and 1,400 million EUR/a (or 71 EUR/kW
