Devices that are long or heavy (or have cables with long, heavy plugs on the end) can cause similar effects because their constant bouncing while driving fatigues the terminal springs in the car's DLC3 connector, until some of the connections are ...

In almost every case of this you only need to replace the module. Dealerships and shops end up fixing both to make more money. There is a way you can properly diagnose whether you need to replace 1 or both parts, but most mechanics are too lazy to spend the 30 minutes. If you only need to replace 1 part then you're saving thousands of dollars.

Hi folks - I'm a novice user here and recent Prius owner seeking guidance on a scanner for a 2004. It recently developed symptoms consistent with a failing ABS actuator (dash lights, pump cycles every 5-10 seconds, brakes suddenly squeaking). I'm going to attempt the repair myself as the best quote I got is \$2,500 (I'm in CA).
