Why do we need energy storage technologies?

The development of energy storage technologies is crucial for addressing the volatility of RE generation and promoting the transformation of the power system.

Is energy storage a new technology?

Energy storage is not a new technology. The earliest gravity-based pumped storage system was developed in Switzerland in 1907 and has since been widely applied globally. However, from an industry perspective, energy storage is still in its early stages of development.

Is energy storage a luxury?

Energy storage technology is recognized as an underpinning technology to have great potential in coping with a high proportion of renewable power integration and decarbonizing power system. However, the costs of energy storage facilities remain high-level and it makes energy storage a luxury in many application fields.

How will storage technology affect electricity systems?

Because storage technologies will have the ability to substitute for or complement essentially all other elements of a power system, including generation, transmission, and demand response, these tools will be critical to electricity system designers, operators, and regulators in the future.
