

Quantum is the world's most advanced electric space heater. It uses low cost, off-peak energy, making it the most economical heating system on the market today. With capabilities to adapt ...

Compatibility with Renewable Energy: Dimplex Quantum storage heaters can be integrated with renewable energy sources, such as solar panels or wind turbines. This allows users to maximize the utilization of renewable energy by storing excess energy generated during off-peak times and using it for heating during peak demand periods.

Dimplex Storage Heater features. Cost savings - Quantum is up to 27% cheaper to run than a standard storage heater system. It's also up to 47% cheaper to run than an electric convector or radiator system. Heat on demand - Quantum stores energy up during periods of low demand, turning it into efficient heat only when needed. Through its use of a ...

The Dimplex Quantum Storage Heater. The Quantum storage heater by Dimplex is one of the most efficient and effective storage heaters to hit the market. First of all it boasts a more compact and better insulating inner core, ...

Controls and sensors. Most conventional night storage heaters have very simple input and output controls, but the Quantum is controlled by a thermostat, meaning you can control your temperature output to 1°C increments. The Quantum will also automatically adjust its settings to maintain this required temperature to within +/- 0.3°C, giving you more accuracy ...

The hallway heater was a Quantum - just a small one, but excellent at heating the middle of the flat. The living room one was an older style one again - and like you we used to keep the output fully closed, varying the input depending on the temperature required.

Using low-cost, off-peak energy, Quantum heaters are the most economical electric heating system on the market. By adapting to individual lifestyle patterns and climate conditions, they provide heat precisely when it's needed, optimising energy usage and minimising waste. ... Compared to standard storage heater systems, Quantum heaters offer ...

The Dimplex Quantum 1500W is the world's most advanced electric space heater. It uses low-cost, off-peak energy, making it the most economical heating system on the market today.

The Dimplex QM150RF is a 1500W Quantum HHR storage heater, which offers low cost, low carbon electric heating and temperature control. Intelligent and customisable, this stylish heater has a steel material body with a powder coated white finish, perfect for a range of commercial or domestic applications.

The Quantum cylinder is a class-leading and intuitive, smart energy storage water vessel. Offering reliable hot water and low running costs, the Quantum range is available in a choice of five capacities, from 125 litres to 300 litres - all unvented.

Hello Fellow Electricians, This type of storage heating is no different to the past hot wires, its a heater, however the control is part of the computer world where the nightmares start. Like smart motorways, smart electric meters welcome to software revision changes, machine code algorithms second guessing would you want it to do and there is ...

Quantum heaters are better insulated than older types of night storage heater, meaning less heat escapes when it isn't needed. They also respond to seasonal temperature changes and "learn" how much heat to store. Thanks to these improvements, the running costs of quantum heaters are around 27% lower than standard night storage heaters.

Storage heaters use off-peak energy to store heat. How do they do that? By warming internal ceramic bricks during the night, when there's less pressure on the National Grid. Like magic, they then release heat gradually throughout the following day. ... Dimplex's Quantum storage heaters are some of the most advanced and economical around ...

Quantum Heating is proud to be Installing UK's most efficient brand of electric storage heaters. With Quantum Heating you can replace your old fashioned heaters with our modern low input electric storage Heaters. Now with 24hour control you will never need to guess the weather outside, You're in control of your heating day and night.

Q.1. When charging the storage heater draws 3.3 kW. There are 3 storage elements each rated @ 1.1 kW. These use off peak electricity. Correct ? Q2. There is one electric fan which must run continuously pushing air through the storage heater to produce heat. Because of this need the storage heater must have A 24 hour electricity supply as well as ...

More expensive storage heaters tend to be more efficient, and therefore cost less to run. Installing a replacement storage heater usually costs from about £70 if there is existing wiring, but it will be pricier if it's a new installation or you need new wiring. Prices vary by location. Storage heaters must be installed by a qualified electrician.

Replacement heaters. We have replaced old night storage heaters in our house with Dimplex Quantum heaters. They look very nice, although larger, are efficient and easy to program once you get the hang of it! To be completely honest I'm uncertain if they are more economical, however, we are an "electric house" so time will tell.

Keeping your energy bills down is really important and your Quantum heaters have been designed with this mind. The Quantum heaters automatically calculate the minimum amount of energy to be stored daily to deliver your heating requirements. The amount of energy taken is based on a number of factors. Some of these you cannot control, for

We recently visited Dimplex at their offices, where they talked us through some of their newest heating products. We started by hearing about why storage heaters were invented, why that need still exists, and what has changed with new technology.. In the 1960s, the UK needed to generate enough electricity overnight to power its huge number of factories.

I am looking to use night storage heaters as a supplementary heating system. The main heating is by wood burning stoves. I have 3 large rooms - one of 30m<sup>2</sup> and 2 of 42m<sup>2</sup> each. On the Dimplex calculator it advises a heater of 5-7kw but the quantum heaters which I would like to install only go up to 1.5kw maximum.
