

Could new batteries save electricity?

New batteries, like the zinc-based technology Eos hopes to commercialize, could store electricity for hours or even days at low cost. These and other alternative storage systems could be key to building a consistent supply of electricity for the grid and cutting the climate impacts of power generation around the world.

What are alternative batteries?

In addition, alternative batteries are being developed that reduce reliance on rare earth metals. These include solid-state batteries that replace the Li-Ion battery's liquid electrolyte with a solid electrolyte, resulting in a more efficient and safer battery.

Are lithium-ion batteries good for stationary storage?

But demand for electricity storage is growing as more renewable power is installed, since major renewable power sources like wind and solar are variable, and batteries can help store energy for when it's needed. Lithium-ion batteries aren't ideal for stationary storage, even though they're commonly used for it today.

Are batteries a new technology?

From smartphones to electric vehicles, batteries single-handedly power some of the single most impactful technologies in our lives. And while batteries themselves aren't some new technology, the lithium-ion (Li-ion) kind that powers most of our devices only began gaining ground a few short decades ago.

Why do lithium-ion batteries need to be recycled?

“Recycling a lithium-ion battery consumes more energy and resources than producing a new battery, explaining why only a small amount of lithium-ion batteries are recycled,” says Aqsa Nazir, a postdoctoral research scholar at Florida International University's battery research laboratory.

Are sodium-based batteries cramming more energy into a smaller package?

And crucially, sodium-based batteries have recently been cramming more energy into a smaller package. In 2022, the energy density of sodium-ion batteries was right around where some lower-end lithium-ion batteries were a decade ago--when early commercial EVs like the Tesla Roadster had already hit the road.

2 CLIMATE CHANGE : BATTERIES CLIMATE CHANGE AND BATTERIES 1.
