Your vehicle's accumulator plays an important role in recycling refrigerant. When the accumulator receives refrigerant from the evaporator, it prevents any liquid refrigerant from entering the A/C compressor, which isn't designed for liquid intake. The accumulator also has a refrigerant reservoir, which is filled with excess refrigerant and a desiccant.

You already purchased the 765 style ie. metal bellows type accumulators, this may not matter much - but I just changed my 720's failed accumulators with new OEM original diaphragm type and no de/repressure is required. Metal bellows design would mean they'd never fail since the gas shouldn't escape like diaphragm and bladder types, but personally I ...
